Au mai participat la elaborarea lucrării:

profesorii : Bratu Rodica, Costin Lia, Ilea Lucia, Pantaziu Hedviga, Furca Donata, Mărgineanţu Dorina, Miheţ Dorel, Munteanu Angela, Pigli Traian, Pocinog Anisia, Doboşan Lia

absolvenţi : Graure Marius , Lungu Daniel, Manea Titus, Topa Adrian, Brata Florian, Stroiţa Simona

elevii : Hilote Daciana, Păcurar Mihai, Serban Mihaela, Dumitrescu Adrian, Ilea Sebastian

COORDONATOR SERIE: Badea Nicolae - dir. adj. şt. I.T.C.I.

COORDONATOR VOLUM: dr.ing.Jurca Ioan
dr.mat.Niculescu Stelian

Lucrarea a fost avizată de inspectoratul şcolar al judeţului Timiş şi de colectivul de avizare din I.T.C.I., constituit din directorii liceelor de informatică, şefii catedrelor de informatică din aceste licee şi de specialişti din I.T.C.I.

CUVINT INAINTE

Tineretul si copii au vibrat intotdeauna fara complexe la nou. Acelasi lucru constatam si astazi, cind noua revolutie tehnico-stiintifica, declansata si impulsionata de microelectronica si informatica, gaseste tinerii in primele rinduri. Elevii din liceele de informatica, din numeroase scoli de cultura generala, medii si profesionale, cuprinsi sau nu in numeroasele cercuri de informatica, sint receptivi, indrazneti, creativi si competenti in raport cu introducerea programarii calculatoarelor. Predarea informaticii, organizarea cercurilor si a olimpiadelor de informatica au dobindit o frumoasa si apreciata traditie. Pentru prima oara alaturi de elevii liceelor de informatica (in total 48), participa 52 elevi din alte unitati scolare intr-o olimpiada a utilizatorilor. Noutatile aduse de progresele cercetarii stiintifice impreuna cu nevoile economiei nationale de programe informatice au modernizat continuu pregatirea in informatica, asigurindu-i in acelasi timp o baza realista. Evolutia continua a procesului educational din liceele de matematica-fizica cu profil de informatica confirma aceasta caracteristica comuna a invatamintului românesc. Programarea calculatoarelor personale este cunoscuta de numerosi elevi si pionieri, de membri cercurilor de informatica organizate de Casele pionierilor ale Consiliului National al Organizatiei Pionierilor, de Institutul pentru Tehnica de Calcul si Informatica, in cadrul proiectului MINICOMP si chiar reprezentanti ai grupei mari din cadrul Gradinitei nr. 52 a institutului nostru.

Invatarea informaticii in scoli nu este insa un scop in sine, ci un proces complex pentru pregatirea tinerilor de astazi pentru a face fata profesiunilor viitorului. De aceea, informatica trebuie sa fie in egala masura o noua disciplina didactica, dar si un instrument de predare. Sistemele de instruire asistata pot fi un sprijin esential in predarea si verificarea nu numai a cunostintelor de informatica, ci si pentru fizica, chimie, matematica, geografie, limba romana si limbi straine, muzica desen. Productia de calculatoare personale va creste substantial in perioada urmatoare, de asemenea a perifericelor si a limbajelor de programare. Sa ne gindim ca in lume sint instalate citeva milioane de calculatoare, iar programele pentru ele au facut deja saltul de la programe simple la medii integrate de programare. Calculatoarele personale si profesionale se pot conecta unele cu altele si pot comunica in acelasi timp cu

calculatoarele centrale, asigurind suportul necesar prelucrarii distribuite. In jurul lor se creeaza statii de lucru informatizate pentru diferite activitati individuale si colective din industrie, agricultura, transporturi, constructii, cercetare si proiectare, invatamint, medicina, servicii publice s.a. Un numar tot mai insemnat de calculatoare sint instalate la domiciliu si pot fi conectate, asemeni telefonului, la reteaua publica, prin intermediul careia pot comunica intre ele, sau cu sisteme de calcul foarte puternice. Pe fondul acestor mutatii a aparut si este pe cale sa devina consacrata microinformatica. Calculatoarele pe care le folositi si care sint destinate educatiei in informatica sint, in general, construite din aceleasi elemente: o tastatura, o unitate centrala, un ecran independent (sau un televizor), o imprimanta. Cele mai performante calculatoare profesionale pot avea insa o memorie interna de la 640 ko la 64 Mo, un disc Winchester de la 10 Mo pina la 115 Mo, procesoare specializate, display grafic color cu 640 x 480 pina la 1028 x 1028 pixeli, procesoare specializate, discuri flexibile, unitati de banda sau caseta magnetica, interfete pentru retele si un sistem de operare foarte performant. Posibilitatile de programare sint multiple folosind limbajele FORTRAN, C, PASCAL, PROLOG, LOGO, LISP si permit inclusiv implementarea de sisteme expert bazate pe metode ale inteligentei artificiale. Intr-un viitor apropiat ele vor permite comunicarea si recunoasterea prin voce si vor conecta la periferic videodiscul care va permite stocarea nu numai de date, ci si de imagini si grafice.

Integrind solutiile cele mai performante din microelectronica, tehnica de calcul si informatica, multe modele, deja comerciale, avind o viteza de peste 7 milioane de instructiuni pe secunda, se vor imbunatati substantial, astfel incit dorinta voastra de a obtine performante cit mai ridicate sa nu fie o simpla aventura a cunoasterii. Numerosi specialisti din cercetare, productie si invatamint sint antrenati in acest proces. Sint convins ca peste citiva ani multi dintre absolventii liceelor de informatica se vor inscrie cu toata competenta si entuziasmul in dezvoltarea noilor tehnologii informatice. Cei care isi vor alege alte meserii nu vor regreta apropierea de informatica, investitia de efort si creatie din acesti ani ii va ajuta sa nu aiba complexe in viitoarea confruntare cu calculatorul prezent in aproape toate locurile de munca.

O confruntare precoce cu tehnologia informatica face posibila obtinerea de cunostinte armonioase, formeaza gindirea algoritmica, stimuleaza creativitatea, permite abordarea multidisciplinara a stiintelor.

Programele informatice si calculatorul sint, de cele mai multe ori, o legatura directa cu imaginatia, potenteaza capacitatea creativa a omului, il sprijina direct in cunoasterea si stapinirea fenomenelor tehnice si naturale.

Directivele cu privire la dezvoltarea economico-sociala a Romaniei in cincinalul 1986-1990 si orientarile de perspectiva pina in anul 2000, aprobate la cel de al XIII-lea congres al PCR, Programul-directiva de cercetare stiintifica, dezvoltare tehnologica si introducere a progresului tehnic in perioada 1981-1990 si directiile principale pina in anul 2000 acorda un rol determinant pregatirii fortei de munca in concordanta cu directiile noii revolutii tehnico-stiintifice si cu cerintele dezvoltarii intensive a economiei. De aici, necesitatea implicarii mai puternice a tehnologiei informatice in triunghiul cercetare-productie-invatamint, calculatorul fiind un element de legatura de o deosebita finete si cu o eficienta remarcabila.

Realizarea, intretinerea si utilizarea cit mai eficienta a echipamentelor, mereu mai perfectionate, presupun o pregatire temeinica, bazata pe dobindirea unei gindiri algoritmice, asociata cu o logica avansata, asa cum o cer calculatoarele electronice. Trebuie ca in scoala sa invatam a invata, pentru ca numai astfel ne vom putea descurca in conditiile exploziei informationale actuale, cind informatia este considerata ca o resursa de mare pret. Procesul de instruire se afla intr-o dinamica permanenta.

Relatia profesor-elev nu trebuie lasata in afara calculatorului ca mijoc de invatamint, patrunderea calculatorului in invatamint vizind atit latura cantitativa, cit si, mai ales, pe cea calitativa.

Materialul de fata constituie o colectie de lectii prin care se doreste a se dovedi avantajele ce le ofera calculatorul in proiectarea scolara pentru diverse discipline.

Publicarea si difuzarea ca material didactic a prezentei culegeri este bine venita, cel putin din urmatoarele trei motive:

- este o argumentare autorizata pentru introducerea calculatorului in invatamintul preuniversitar si un ghid util privind modul in care se poate folosi calculatorul, oferind modele pentru diferite discipline scolare;

- dezvaluie posibilitati de utilizare creatoare a calculatoarelor de productie romaneasca;

- sint prezentate o serie de programe utilitare create de autorii culegerii (LPRINT ET, COMPACT SCREEN$, 64 COL, WINDOW), menite sa extinda posibilitatile de programare.

Demn de mentionat este faptul ca elevii si-au adus o contributie remarcabila in realizarea prezentului material si ce este mai de pret decit sa faci pe cei ce invata sa fie creatori inca de pe bancile scolii ?

Prezentul material inaugureaza o serie de volume pe care institutul nostru le va elabora in colaborare cu unitati de invatamint in sprijinul introducerii informaticii in invatamintul preuniversitar, in cadrul programelor coordonate de Ministerul Educatiei si Invatamintului.

Nu putem incheia fara a felicita pe toti cei ce au contribuit la elaborarea prezentului volum si conducerea liceului pentru eforturile depuse in asigurarea unei pregatiri de ridicat nivel a elevilor Liceului de matematica-fizica nr.1 din Timisoara.

Colaborarea continua a liceelor cu profil de informatica cu cercetatorii sectiei de sisteme informatice pentru instruire, din Institutul de Tehnica de Calcul si Informatica, orientarea metodologica atenta din partea compartimentelor de resort din Ministerul Educatiei si Invatamintului, creeaza cadrul oportun de valorificare a potentialului existent de experimentare si generalizare a rezultatelor obtinute, de introducere a informaticii in stricta concordanta cu necesitatile invatamintului.

Nicolae Badea

dir.adj.stiintific al ICSIT-TCI

INTRODUCERE

Cartea contine o culegere de lectii in care calculatorul este folosit ca auxiliar pentru predare , fixarea cunostintelor si examinare .

Publicarea si difuzarea acestei culegeri o consideram necesara din urmatoarele motive :

- Este o pledoarie pentru introducerea calculatorului in invat intul mediu si un ghid practic asupra modului in care se poate folosi calculatorul , oferind modele pentru majoritatea disciplinelor predate in invatamintul mediu . Se demonstreaza posibilitatea folosirii calculatorului practic la toate disciplinele de invatamint . Exemple : limba romana , biologie , limbi moderne , geografie , pe linga disciplinele considerate mai strins legate de informatica : matematica , fizica , chimie.
- Dezvaluie posibilitati de utilizare creatoare a calculatorului personal fabricat in tara noastra din seria TIM-S , HC-85 .
- Programele prezentate sint complete , pot fi imediat folosite , sint insotite de explicatiile necesare pentru utilizator . Sint cuprinse listingurile programelor in limbajul BASIC , rutinele in cod-masina (limbaj de asamblare) , imagini de ecran din timpul rularii programelor .
- Sint incluse o serie de programe utilitare , create de autori , cum ar fi: LPRINT ET , COMPACT SCREEN$, 64 COL , WINDOW , care extind posibilitatile calculatorului si faciliteaza dezvoltarea de programe noi , performante .
- Autorii principali ai programelor sint elevii , indrumati de profesorii lor , cartea costituind si o demonstratie a interesului pentru tehnica de calcul si a capacitatii lor creatoare .
- Sta la indemina fiecarui liceu sa-si procure tehnica de calcul necesara pentru utilizarea programelor descrise in carte .
- Cartea se adreseaza unei categorii largi de cititori , de care depinde viitorul informaticii in tara noastra . Cartea nu este numai pentru specialisti ci in primul rind pentru beneficiarii calculatoarelor .
- Reprezinta un model de lucru in echipa profesor-elev .
- Programele sint realizate la un inalt nivel profesional

ideile de realizare putind fi luate ca model pentru noi programe.

- Se deschide calea unei serii de carti destinate invatamintului asistat de catre calculator , care sa contribuie la un salt calitativ in procesul instructiv-educativ .
- Utilitatea lucrarii creste si datorita faptului ca se prevede introducerea informaticii in toate scolile , incepind cu nivelul gimnazial .
- Liceele de informatica au si menirea de a fi "statii-pilot" in acest domeniu .
- Un singur capitol este destinat unor probleme "pure" de informatica , translatarea programelor dintr-un limbaj in altul , restul capitolelor fiind destinate utilizarii calculatoarelor in diferite domenii .

CAPITOLUL 1

MATEMATICA

1.1. ALGEBRA

FUNCTIA DE GRADUL II CU UN PARAMETRU REAL

Programul FUNCTIA DE GRADUL II CU UN PARAMETRU REAL a fost conceput in scopul folosirii sale de catre profesori si elevi in cadrul orelor de matamatica in care se studiaza familii de functii de gradul II.

Trasarea graficelor cu ajutorul calculatorului prezinta urmatoarele avantaje:precizie sporita,posibilitatea trasarii graficelor la orice scara,calcularea rapida a unor caracteristici.

Dupa incarcarea programului este afisat un meniu cuprinzind urmatoarele optiuni:

1-Exemple
2-Grafice
3-Probleme

1.1.1.Exemple

Alegerea optiunii 1 duce la afisarea unui alt meniu care permite alegerea unor familii de functii cu diferite caracteristici (graficele nu au nici un punct comun,graficele au unul sau doua puncte comune,virfurile graficelor sint pe o dreapta sau sint pe o parabola).In urma alegerii uneia din optiunile afisate se trasează 6 gafice din familia respectiva de functii si sint afisate coordonatele punctelor comune sau ecuatia dreptei ce uneste virfuriie parabolelor daca este cazul.

In timpul trasarii graficelor,pe ultima linie a ecranului,s

sint afisate coordonatele virfului si valoarea parametrului m.

1.1.2. Grafice

In cazul in care se doreste trasarea graficelor unei familii de functii introduse de utilizator se alege optiunea 2 si apoi se introduc coeficientii A,B,C ca functii de m.

Se introduc valorile intre care variaza parametrul m si parametrul t in functie de care se alege scara la care se traseaza graficele.

Dupa ce se traseaza 6 graficeesint afisate,atunci cind este cazul,coordonatele punctelor comune si ecuatia dreptei sau parabolei care uneste virfurile graficelor.

1.1.3. Probleme

In cadrul optiunii 3 sint afisate enunturile si rezolvarile a 3 probleme precum si graficele functiilor.

Sint propuse spre rezolvare enunturile a 3 probleme.

In cazul in care apare o eroare sau a fost oprita executia programului acesta se poate relansa cu GO to 5000.

Programul poate fi imbunatatit sau modificat in scopul realizarii unui program care sa cuprinda alte proprietati ale functiei de gradul II.

1.2. GEOMETRIE

LOCURI GEOMETRICE

Tema lectiei:Determinarea unor locuri geometrice de baza

In categoria programelor-instrumente de pret la indemina profesorilor de matematica,se constituie si programul "LOCURI-GEOM".

Programul trateaza un set de 6 probleme din manualul de geometrie de clasa a IX-a. Rezolvarea acestor probleme cu ajutorul calculatorului este nu numai indicata dar si absolut necesara pentru invatamintul modern. Problemele rezolvate in acest mod sint din categoria celor de locuri geometrice. Intuirea formei locului geometric cerut in enuntul problemei este foarte dificila daca s-ar folosi mijloace de invatamint traditionale. Aportul calculatorului la acest domeniu al geometriei este foarte eficient tinind seama de faptul ca prin program se calculeaza efectiv pozitia fiecarui punct care apartine locului geometric. Calculele se bazeaza pe elemente de geometrie analitica. Pentru facilitarea intuirii formei locului geometric inainte de generarea completa a locului geometric respectiv se calculeaza citeva puncte izolate care apartin locului si se ploteaza pe ecran. Dupa afisarea fiecarui punct se trece la generarea urmatorului punct. Dupa calculul citorva puncte programul se deruleaza fara interventia utilizatorului pina la afisarea completa a locului geometric respectiv.In final dupa apasarea unei taste se afiseaza pe ecran un text care expliciteaza forma locului geometric cerut de problema respectiva. Locul geometric care rezulta prin calcule se genereaza pe ecran cu alta culoare pentru a se deduce mai usor si vizual forma.

Dam in cele ce urmeaza textul problemelor rezolvate:

1. Fie AB un diametru fix al unui cerc C(o,r) iar M un punct variabil pe cerc. Se ia pe raza OM un punct P astfel OP=d(M,AB). Sa se afle locul geometric al punctului P.

2. Fie AB o coarda fixa al unui cerc iar PQ o coarda variabila ca pozitie dar de lungime fixa.Sa se afle locul

geometric al punctelor AP intersectat cu BQ si AQ intersectat cu BP.

3. AB fiind o coarda fixa iar M un punct variabil al unui cerc,sa se afle locul geometric al punctului P astfel incit M apartine lui AP si MP=MB.

4. Se considera un cerc,o coarda fixa AB si un punct M variabil pe cerc. Sa se determine locul geometric al ortocentrului triunghiului AMB.

5. Se considera un cerc,o coarda fixa AB si un punct M variabil pe cerc. Sa se determine locul geometric al centrului de greutate al triunghiului AMB.

6. Fie A un punct fix iar P un punct variabil al unui cerc. Sa se afle locul geometric al punctului M de intersectie a bisectoarei unghiului POA cu cercul circumscris triunghiului POA

Programul nu are un caracter interactiv cu exceptia rezolvarii problemei a doua cind se cere utilizatorului sa aleaga intre doua marimi pentru lungimea coardei variabile.Acest lucru este determinat de dificultatea incadrarii in ecran pentru vizualizarea solutiei.La marimi alese arbitrar ar putea exista posibilitatea neaparitiei figurii sau locului pe ecran cu toate ca programul lucreaza. Exista posibilitatea reintoarcerii la oricare problema pe baza unui meniu care se afiseaza la terminarea rezolvarii fiecarei probleme. De asemenea la revenirea intr-o problema se afiseaza la inceput textul problemei asemenea unei masini de scris dupa care la apasarea unei taste se deruleaza construirea locului geometric cerut prin problema respectiva.

Programul apartine unui ciclu de programe pentru locuri geometrice care rezolva in intregime acest domeniu din geometria clasei a IX-A.

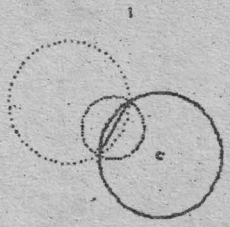
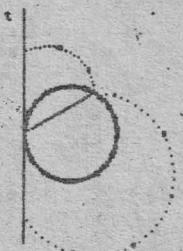
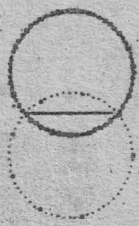
Locul geometric este format din două cercuri tangente în O de rază R/2 și de centre situate pe diametrul cercului dat



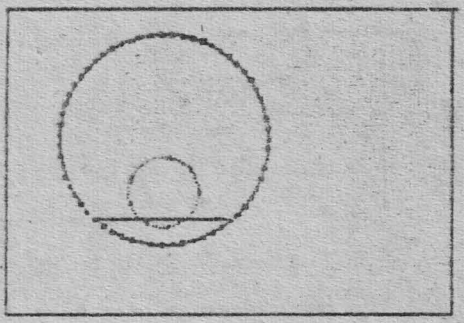
Locul geometric :două cercuri secante care au coarda AB fixă , comună.

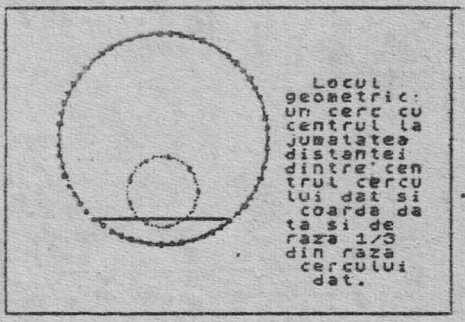


Locul geometric :două porțiuni de cercuri secante limitate de tangenta în A la cerc care au coarda AB fixă ,comună.

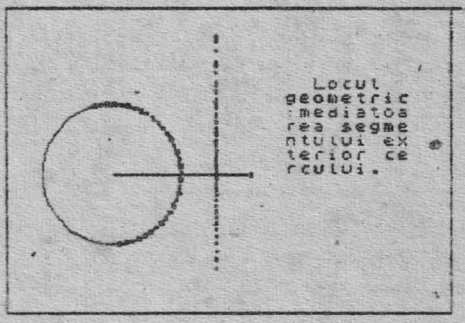


Locul geometric :un cerc simetric cu cercul dat față de coarda dată.





Locul geometric: un cerc cu centrul la jumatatea distantei dintre centrul cercului dat si coarda data si de raza 1/3 din raza cercului dat.



Locul geometric: mediatoarea segmentului exterior cercului.

CAPITOLUL 2
FIZICA

2.1. OSCILATII

In acest capitol ne propunem sa aratam modul in care poate fi utilizat calculatorul personal in cadrul orelor de fizica, capitolul OSCILATII.

Au fost elaborate 5 programe pentru aceasta tema, aici fiind prezentate primele 4 indicindu-se modul lor de utilizare in cadrul lectiilor.

*** OSCILATII1 ***

Lectia incepe cu punerea in evidenta a miscarii unui pendul gravitational si a unui pendul elastic. Se trece apoi la utilizarea programului OSCILATII1.

PAGINA 1

Se vizualizeaza pe monitor un oscilator in pozitia de echilibru (PE). Se atrage atentia elevului ca el va fi pus in miscare sub actiunea unei forte exterioare. Apasind o tasta incepe miscarea de oscilatie a oscilatorului. Elevii observa ca miscarea este simetrica fata de PE si ca este periodica. S e d e f i n e s t e m i s c a r e a o s c i l a t o r i e.

PAGINA 2

Oscilatorul in pozitie de echilibru si prin apasarea unei taste, trece intr-o pozitie oarecare. Pozitia oscilatorului fata de PE este indicata cu ajutorul vectorului de pozitie y. S e d e f i n e s t e e l o n g a t i a. Apasind o tasta oscilatorul isi modifica pozitia si simultan pe monitor apare vectorul elongatie corespunzator. Tinind apasata o tasta oscilatorul va efectua 6 oscilatii.

PAGINA 3

Se aduce oscilatorul la distanta maxima fata de PE. S e d e f i n e s t e a m p l i t u d i n e a. Se apasa o tasta si se aduce oscilatorul la distanta maxima de PE, dar dedesubtul ei.

PAGINA 4

Se urmareste de catre elevi miscarea simultana a doi oscilatori cu amplitudini diferite.

PAGINA 5

Defineste oscilatia completa. Se urmareste de catre elevi

miscarea oscilatorului din PE pina la revenire in PE. S e d e f i n e s t e o s c i l a t i a c o m p l e t a. Se atrage atentia ca o oscilatie completa poate incepe din orice pozitie a oscilatorului. Se apasa o tasta si se vizualizeaza inca o oscilatie completa.

PAGINA 6

Defineste perioada si frecventa. Pe monitor se inregistreaza durata si numarul de oscilatii complete. Se solicita elevilor sa calculeze durata unei oscilatii complete si s e d e f i n e s t e p e r i o a d a. Se cere sa se calculeze numarul de oscilatii complete din unitatea de timp, s e d e f i n e s t e f r e c v e n t a si se stabileste relatia dintre ele.

PAGINA 7

Prezinta miscarea simultana a doi oscilatori cu frecvente diferite.

PAGINA 8

Prezinta miscarea unui oscilator a carui frecventa poate fi modificata de la valoarea 0,la 20,respectiv 30.

*** OSCILATII2 ***

Se reactualizeaza notiunea de lege de miscare, elongatie, amplitudine. Se trece apoi la utilizarea programului OSCILATII2.

PAGINA 1

Se vizualizeaza pe monitor o miscare circulara uniforma a unui mobil, simultan su miscarea oscilatorie a proiectiei sale pe axa Oy. Apasind succesiv tastele se vizualizeaza elongatia y ca proiectie a vectorului de pozitie a mobilului ce se misca circular.

PAGINA 2

In timp ce mobilul se misca circular se urmareste variatia vectorului elongatie a oscilatorului.

PAGINA 3

Stabileste relatia dintre y si r (y proiectie a lui r).

PAGINA 4

Realizeaza reprezentarea grafica a lui y=f(t). Se insista asupra faptului ca modulul vectorului y elongatie se poate obtine la orice moment din reprezentarea grafica.

PAGINA 5

La momentul initial oscilatorul nu se gaseste in pozitia de echilibru. Se cere elevilor sa determine valoarea elongatiei la momentul initial. Apasind o tasta relatiile apar pe monitor.

La un moment ulterior oscilatorul ocupa alta pozitie (prin apasarea unei taste. Se cere elevilor sa determine modulul lui y la acest moment ulterior. Se deduce legea de miscare.

PAGINA 6

Verifica raspunsurile date de elevi. La apasarea unei taste oscilatorul revine in pozitia initiala, iar la o noua apasare el oscileaza si simultan se reprezinta grafic legea de miscare.

PAGINA 7

Defineste faza miscarii. Oscilatorul este in pozitie de echilibru iar la un moment ulterior (apasind o tasta) ajunge in pozitia y=A/2. Se cere elevilor sa indice valoarea argumentului functiei sinus din ecuatia de miscare. Argumentul functiei sinus din ecuatia de miscare este PI/6. Se defineste faza miscarii.

Apasind o tasta apar relatiile necesare. Se cere elevilor sa indice pozitia oscilatorului daca faza este PI/2 rad.

PAGINA 8

Indica pozitia oscilatorului la acest moment. Se cere elevilor sa indice pozitia oscilatorului daca faza este 5PI/6 rad.

PAGINA 9

Indica pozitia oscilatorului la acest moment.

PAGINA 10

Ilustreaza miscarea oscilatorului cind faza variaza de la:

0	-	PI/2
PI/2	-	PI
PI	-	3PI/2
3PI/2	-	2PI

Profesorul defineste pulsatia miscarii oscilatorii.

PAGINA 11

Evalueaza gradul de asimilare a notiunii de pulsatie.

*** OSCILATII3 ***

Se reactualizează notiunea de lege a vitezei. Se trece apoi la utilizarea programului OSCILATII3.

PAGINA 1

Stabileste legatura dintre viteza oscilatorului si componenta pe axa Oy a vitezei mobilului ce se misca circular.

PAGINA 2

Deduce expresia vitezei oscilatorului in functie de timp. Imaginea de pe monitor se trece in caietele elevilor, iar profe-

acrul deduce impreuna cu elevii legea vitezei.

PAGINA 3

Prin apasari succesive de taste se ajunge la stabilirea legii acceleratiei. Profesorul va dirija prin intrebari rationamentul elevilor.

PAGINA 4

Vizualizeaza orientarea vectorilor a,v si v prin apasari succesive de taste.

*** OSCILATII4 ***

Se revad notiunile de energie cinetica, energie potentiala, energie totala si expresiile lor matematice. Se scoate in evidenta transformarea reciproca a energiei potentiale in cineti ca si invers, in timpul miscarii de oscilatie. Se trece la utili zarea programului OSCILATII4.

SECVENTA 1

Oscilator armonic (pendul elastic) scos din pozitia de echilibru.

SECVENTA 2

Prin apasarea succesiva a unei taste se vizualizeaza miscarea oscilatorului si valorile energiilor potentiala, cinetica si totala la diferite momente. La apasarea tastei SPACE, oscilatorul se deplaseaza din pozitia initiala si simultan se reprezinta grafic dependenta energiei potentiale si cinetice de elongatie.

La apasarea unei taste se realizeaza suma:

$$Ec + Ep = Et = const.$$

Lectia continua cu deducerea de catre elevi a expresiilor energiei cinetice, potentiale si totale a oscilatorului si cu

2.2. EMISIA ELECTRONICA

Fenomenele fizice care se produc la nivel de atomi sau de electroni deoarece nu sint vizibile sint mai greu de inteles si de asimilat de catre elevi. De aceea am incercat sa creem modele animate cu ajutorul calculatorului prin intermediul carora , elevul sa inteleaga mai bine aceste fenomene si notiuni de baza din fizica de liceu .

Programul a fost conceput prntru calculatorul Spectrum 128K deoarece a necesitat un spatiu mai mare de memorie .

Conform definitiei emisia electronica este fenomenul de expulzare al electronilor din metale sub influenta unor factori externi ; programul isi propune sa "explice" fenomenele de emisie termo- si fotoelectronica .

In studiul emisiei electronice din metale ne-am limitat la studiul (si implicit desenul) benzii de conductie.

Dupa incarcarea programului va aparea un meniu :

1. Termoemisia electronica
2. Fotoemisia electronica
3. Emisia prin efect de camp
4. Emisia autoelectronica
5. Emisia secundara
6. Dioda. Trioda.
7. Tetroda.

Optiunea 1 : Termoemisia electronica

Pentru inceput am considerat necesara simularea miscarii haotice a electronilor in reteaua metalica , in jurul ionilor pozitivi . Daca aplicam asupra metalului un camp electric de intensitate E , atunci vectorul viteza al unui electron din retea va fi compusul dintre viteza initiala a electronului si viteza generata de E . Toate acestea au fost realizate prin animatie astfel fiind mai bine insusita lectia decatre elev . In continuare se va trece la fenomenul propriu-zis de termoemisie electronica .

In acest subcapitol am considerat necesara descrierea starii electronilor in metale la 0 K , stare in care, in absenta unor agenti exteriori , acesti electroni nu pot parasi metalul deoarece gazul elecronic in asemenea conditii nu participa la miscarea de agitatie termica . Imaginea prezinta variatia energiei electronului cu distanta in directia normala la suprafata metalului la T=0K , de asemenea sint ilustrati spinii electronilor (opusi pe fiecare banda energetica conform principiului de excluziune al lui Pauli) , iar electronii pina la nivelul Fermi (nivelul cu cea mai mare energie. La studiul cazului in care T>0K se va observa cum un numar de electroni parasesc metalul , deci suprafata metalului va ramine incarcata pozitiv ,intre electronii iesiti si suprafata metalului va aparea o forta electrostatica care ii va atrage pe electroni si acestia se vor intoarce inapoi deci se stabileste un echilibru dinamic (numarul electronilor ce ies din metal in unitatea de timp este egal cu numarul de electroni ce intra in metal in unitatea de timp) ; la suprafata metalului se formeaza o pelicula de forma suprafetei exterioare , care va forma un "condensator" impreuna cu suprafata metalului ,incarcata pozitiv Cimpul electric astfel format va actiona asupra electronilor cu o forta orientata din exterior spre interior. Variatia energiei potentiale a electronilor este de asemenea ilustrata prin curbarea gropii de potential . Se observa de asemenea foarte clar cum la T>0K ,un numar de electroni de pe nivele situate sub nivelul Fermi cistiga energie termica si trec pe nivele superioare nivelului Fermi. In partea superioara a ecranului este desenat tot timpul o bucata de metal la care se poate observa in mare emisia termoelectronica .

Optiunea 2 : Emisia fotoelectronica

Foarte spectaculoasa din punct de vedere al fenomenului ce se produce la nivel electronic , emisia de electroni cind asupra metalului este aplicata o raza luminoasa de o anumita intensitate prezinta o importanta practica deosebita (fotodioda de exemplu).

De aceea am incercat sa prezentam principalele faze ale emisiei fotoelectronice , precum si desfasurarea acestui fenomen in diferite coditii (tensiune aplicata electrozilor de

astele numuri precum si diferenta diferentei de potential intre electrozi).

In timpul rularii in partea stinga a ecranului sint expuse tuburile electronice la diferite tensiuni aplicate electrozilor tubului in partea stinga urmatoarele grafice : caracteristica tubului electronic , dependenta energiei cinetice a electronilor de frecventa radiatiei incidente , dependenta energiei cinetice a electronilor de frecvente radiatiilor incidente pentru catozi din diferite (no1,no2,no3 sint frecventele de prag ; M1,M2,M3 sint codificari date la trei metale). Se asemenea in partea de jos sint afisate cele patru legi ale fotoefectului sub forma de concluzii . Deoarece spatiul ecran nu permite vizionarea tuturor graficelor si a tuturor concluziilor programul a fost conceput in ase fel incit in orice moment sa poata fi vizionate orice grafic si orice lege a fotoefectului cu ajutorul unui meniu, ce se afla in partea de jos a ecranului.

Optiunea 3 : Emisia prin efect de cimp

Acest subcapitol a fost conceput in sprijinul celor pasionati care doresc sa se initieze in aceste parte a fizicii si pentru cercurile de elevi , deoarece emisia prin efect de cimp nu se studiaza in liceu .

Daca aplicam la suprafata unui metal un cimp electric , acesta determina o micsorare a lucrului mecanic de extractie , deci cu cit intensitatea cimpului electric exterior E este mai mare cu atit densitatea curentului termoelectronic emis datorita incalzirii metalului este mai mare .

Marim intensitatea cimpului electric extern pina cind va avea modulul egal cu modulul lui Es . In acest caz la suprafata metalului cimpul electric rezultant este nul , si electronii parasesc mai usor metalul . In imagine am reprezentat aceasta printr-o curba la nivelul V=0 .

Crestem in continuare cimpul electric extern si lucrul mecanic de extractie se micsoreaza iar intensitatea curentului creste peste valoarea normala a curentului de saturatie (electronii parasesc metalul chiar la excitari termice mici). Acest efect de cimp se numeste efect Schottky si reprezinta o corectie la emisia termoelectronica .

Am pastrat acelasi aranjament in ecran ca la emisia

termoelectronica (in stinga simularea fenomenului la nivelul benzii de conductie iar in dreapta comentarii)

Optiunea 4 : Emisia autoelectronica

Denumita si emisia la rece , emisia autoelectronica , are loc numai sub actiunea cimpului electric extern , si se datoreaza scaderii grosimii barierei de potential ca urmare a actiunii cimpului electric (cu cit cimpul este mai puternic , cu atit bariera de potential devine mai ingusta) . Deci bariera de potential devine suficient de 'transparenta ' pentru a fi strabatuta de electronii din banda de conductie . In imagine am figurat curba care delimiteaza bariera de potential .

Si aici am pastrat acelasi aranjament in ecran ca la emisia termoelectronica si emisia prin efect de cimp .

Optiunea 5 : Emisia secundara

Denumita si efectul dinatron , emisia electronica secundara consta in emiterea de electroni din suprafata unui metal sub actiunea 'bombardarii' lui cu electroni care au energie cinetica mare . Am simulat acest fenomen prin reprezentarea suprafetei unui metal care este 'bombardata' de un electron cu energie cinetica mare care va scoate din metal alti electroni .

In partea stinga a ecranului am simulat fenomenul iar in partea dreapta a ecranului explicarea pe scurt a efectului .

Optiunea 6 : Dioda. Trioda.

In cadrul acestei parti am incercat sa explicam functionarea principalelor componente electronice care functioneaza pe baza efectului de emisie termoelectronica .

La dioda am studiat functionarea pentru diferite tensiuni anodice ; in partea stinga a ecranului in timpul executiei sint afisate caracteristica teoretica si reala a diodei ; in partea dreapta apare o sectiune prin dioda cu ajutorul careia se va putea urmari functionarea diodei pentru diferite tensiuni anodice . De asemenea in timpul executiei sint afisate scurte comentarii .

La trioda am studiat functionarea pentru diferite tensiuni

de grila , aranjamentul in ecran este acelasi ca la digda .

Optiunea 7 : Tetroda.

O aplicatie la fenomenul de emisie electronica secundara o constituie tubul electronic tetroda .

Am studiat functionarea unei tetrode pentru diferite tensiuni anodice , dar avind tensiunea de grila si tensiunea de ecran constante . In timpul rularii programului au fost explicate toate fenomenele care apar . Am insistat asupra portiunii din caracteristica intre punctele de maxim si minim local unde fenomenul de emisie secundara se poate intelege mai bine .

In timpul rularii , in partea dreapta a ecranului se poate viziona simularea comportarii electronilor intre ecran si anod iar in partea stinga , in timpul simularii , sint trasate caracteristicile anodice ale tubului electronic si descrierea pe scurt in cuvinte a fenomenelor simulate .

Pentru scriere pe 64 de caractere am folosit subrutinele in cod masina ale programului 'WINDOWS' .

CAPITOLUL 3

CHIMIE

In acest capitol am avut ca scop demonstrarea utilitatii calculatorului in simularea reactiilor chimice , sau in simularea unor procese chimice tehnologice .

Astfel am realizat un program care , prin modul cum a fost conceput poate fi folosit atit in scop de autoinstruire cit si in scop didactic .

3.1. ZAHARUL

Produsul program se refera la obtinerea zaharului, prezentind structura sa si schema instalatiei de fabricare industriala . Fiind un program didactic este adresat elevilor, dovedindu-se util in predarea acestor notiuni. Conform programei de chimie, zaharul se studiaza in cadrul chimiei organice, capitolul din care face parte fiind "Substante naturale cu importanta fiziologica". Avind o importanta deosebita, zaharidele, cu reprezentantul lor cel mai de seama, zaharul, au o structura mai complexa comparativ cu substantele intilnite pina atunci. De aceea, la primul contact cu acestea, uneori, elevului ii este mai greu sa-si insuseasca formulele lor structurale. Scopul acestui program este de a veni in ajutorul elevilor si implicit al profesorilor, in predare.

Prima parte a programului contine reprezentarea zaharozei cu ajutorul formulelor ciclice. Ne-am oprit asupra zaharozei, ea fiind cea mai raspindita dintre zaharide si pentru ca aratind obtinerea ei, includem si structurile celor doua monozaharide din care se sintetizeaza, glucoza (anomerul .) si fructoza (anomerul .).

Pentru monozaharide se pot scrie formulele aciclice care reprezinta multumitor structura celor doua molecule (glucoza si fructoza) dar nu explica o serie de proprietati chimice, de exemplu : absenta in unele cazuri, a reactiilor specifice gruparii carbonil, prezenta, in anumite conditii a unei grupari hidroxil cu reactivitate mult marita fata de a celorlalte. etc.

In consecinta, pentru a rezolva asemenea neconcordante, s-au adoptat structurile ciclice. Ele rezulta din interactia gruparii carbonilice cu una din gruparile hidrohil ale hexozei respective. In cazul glucozei, la ciclizare pot participa gruparile hidroxil din pozitia 4 sau 5, iar la fructoza gruparile din pozitia 5 sau 6. Corespunzator vom avea formele furanozice si piranozice. Ca urmare a ciclizarii la atomul de carbon carbonilic apare o noua grupare hidroxil, cu proprietati privilegiate, numita hidroxil glicozidic (morcat in formularile din lucrare cu alta culoare). Pentru ca legaturile care s-au atribuit oxigenului in formularile ciclice sint anormal de lungi si deci incorecte, s-a recurs la reprezentarea ciclului sub forma unui hexagon regulat pentru glucoza (pentagon pentru fructoza). Acesta are o configuratie plana, cu substituientii atomilor de carbon dispusi de o parte si de alta a sa. Atomul de carbon care are hidroxilul glicozidic (atomul de carbon a fostei grupari carbonil) determina aparitia a doua forme denumite anomere (notate cu . si .). Ele difera una fata de alta prin pozitia gruparii hidroxil glicozidic.

Ne-am oprit doar la reprezentarea anomerului . al glucozei si a anomerului . al fructozei, celelalte forme avind o dispozitie spatiala asamanatoare. Prin apropierea celor doua monozaharide, am simulat eliminrea apei si formarea legaturii dicrbonilice, dtorita careia, zaharoza nu are proprietati reducatoare.

Dupa ce elevul si-a format o imagine clara asupra structurii zaharozei, poate apela la ce-a de-a doua parte a programului. Aceasta parte prezinta un model, binenteles mai simplificat, al instalatiei de obtinere industriala a zaharului. Programul descrie animat trecerea succesiva a solutiei diluate de zahar prin corpurile instalatiei. Sint specificate substantele si agentii fizici carora le sint supusi taiteii de sfecla de zahar.

Pentru comentarile din timpul rularii am folosit scrierea pe 64 de coloane,in ferestre, subrutine din programul WINDOWS.

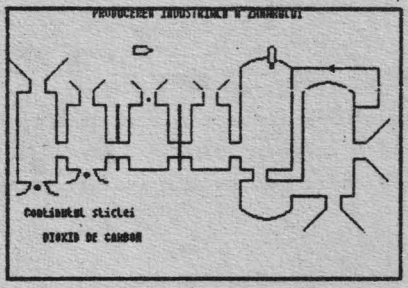
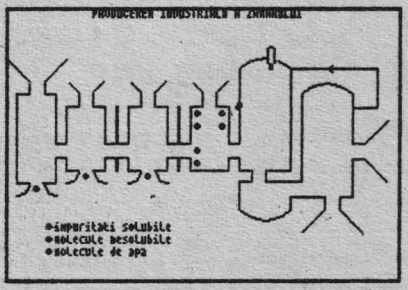
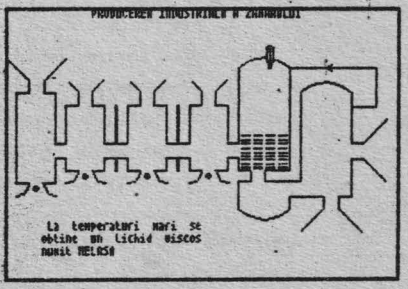
PRODUCEREA INDUSTRIALĂ A ZAHĂRULUI
În apă sînt introduși
TĂIȚEI DE SFECLĂ DE ZAHĂR



PRODUCEREA INDUSTRIALĂ A ZAHĂRULUI
Conținutul sticlei
DIOXID DE CARBON



PRODUCEREA INDUSTRIALĂ A ZAHĂRULUI
•impurități solubile
•molecule nesolubile
•molecule de apă



PRODUCEREA INDUSTRIALĂ A ZAHĂRULUI
La temperaturi mari se
obține un lichid vîscos
numit MELASĂ

CAPITOLUL 4

LIMBA ROMANA

Folosirea calculatorului este eficienta , nu doar in lectiile la stiintele exacte ,ci si in cadrul lectiilor de limba romana , istorie etc.

4.1. SINTAXA FRAZEI

Pentru exemplificare am conceput un program care are ca scop testarea cunostintelor de sintaxa frazei a elevilor de clasa a VIII-a program care a fost folosit cu rezultate foarte bune ,la scara mai restrinsa , in unele scoli generale din Timisoara .

Dupa incarcare apare un meniu:

1-Executie
2-Instructiuni

Alegerea optiunii 2 are ca efect listarea tuturor comenzilor si abrevierilor folosite.

Comenzi :

CAPS SHIFT+5	cursor stinga
CAPS SHIFT+8	cursor dreapta
q	pozitionare cursor stinga sus
p	subliniere predicat
e	element de legatura
s	delimitarea propozitiilor
EDIT	terminarea delimitarii in propozitii

Abrevieri :

Pp	Propozitie principala
Sb	Subordonata subiectiva
Pr	Subordonata predicativa

Cd Subordonata circumstantiala directa
Ci Subordonata circumstantiala indirecta
Cl Subordonata circumstantiala de loc
Ct Subordonata circumstantiala de timp
Cm Subordonata circumstantiala de mod
Cs Subordonata circumstantiala finala (de scop)
Cc Subordonata circumstantiala de cauza
Co Subordonata conditionala
Cn Subordonata consecutiva
Cv Subordonata concesiva

Dependenta propozitiilor se introduce sub forma unui sir de numere de doua cifre in ordine crescatoare.

Exemplu :

pentru o propozitie legata de propozitiile 5,6,2,9,11 se va introduce urmatorul sir : 0205060911

Verificarea corectitudinii analizei se face in doua etape :

-se verifica corectitudinea impartirii in propozitii
-se verifica corectitudinea analizei

In cazul in care in una din cele doua etape se gasesc greseli se afiseaza analiza corecta.

Dupa alegerea optiunii 1 se alege setul de fraze si se porneste casetofonul.

Dupa afisarea frazei apare un cursor in coltul din stinga sus si se asteapta introducerea comenzilor.

Alaturi de programul de baza a fost conceput un program auxiliar pe care il va folosi examinatorul pentru crearea de seturi de teste . Si in cadrul acestui program sint afisate instructiunile pentru a fi la indemina utilizatorului .

Ambele produse program au fost realizate pentru ca sa poata fi utilizate si de persoane care nu cunosc informatica .

Daca totusi se doreste oprirea programului in timpul executiei , se va tasta simplu BREAK iar relansarea se va face cu GOTO 30 (daca dati RUN se vor sterge seturile de date cu

fraze) , iar daca doriti incarcarea unui nou set de date dati GOTO 9000 (sau RUN 9000)

Trebuie sa amintim utilizatorului ca testarea se va face in functie de datele introduse prin programul de creare a seturilor de fraze , iar daca aceasta analiza este gresita din punct de vedere gramatic atunci si testarile facute cu elevii vor da rezultate gresite , caci testarile se fac in functie de analiza facuta de cel care a format setul de fraze cu programul auxiliar .

Pentru incrcarea programului de testare se va da LOAD "sYNTAx" , iar pentru incrcare programului auxiliar de formare a seturilor de date se va da LOAD "Fraz-form" .

CAPITOLUL 5
LIMBI MODERNE

5.1. LIMBA ENGLEZA

INDIRECT SPEECH

In zilele noastre calculatorul personal a devenit un instrument folosit pe scara larga in procesul de instruire si in special in invatarea limbilor straine.

Avantajele oferite de tehnica de calcul sint legate in primul rind de posibilitatea individualizarii instruirii in functie de elev si a autoinstruirii ghidate de program. La acestea se adauga sporul de atractivitate datorat imaginilor animate, muzicii sintetizate si faptului ca partenerul de dialog este o masina.

Lucrarea isi propune sa exemplifice printr-o lectie programata de gramatica citeva din avantajele oferite de folosirea calculatorului personal.

Utilizarea calculatorului in orele de limba engleza a luat proportii din ce in ce mai mari de citiva ani. Lucrarea "The Indirect Speech" trateaza problema trecerii propozitiilor din vorbirea directa in vorbirea indirecta. Ea poate fi folosita in clasa a IX-a, cind engleza este studiata ca a doua limba, sau in clasa a VIII-a, cind este studiata ca prima limba. Lucrarea a fost conceputa pentru a veni cit mai mult in sprijinul elevului, ea putind fi utilizata nu numai in munca profesorului cu o clasa sau o grupa de elevi, ci si individual, intr-o invatare autonoma. Dorind sa vina in sprijinul atit al elevului cit si al profesorului, lucrarea incearca sa faca cit mai usoara si placuta invatarea limbii engleze.

Dupa incarcare programul se lanseaza automat in executie. Prin apasarea sagetilor (sus,jos) si apoi ENTER se poate alege o optiune din meniu.

Meniu

STATEMENTS
THEORY

EXERCISES
SAVE

Partea intii, "STATEMENTS", prezinta in limba engleza citeva informatii despre program si posibilitatile lui.

Partea a doua, "THEORY", ofera din nou posibilitatea de a alege dintr-un submeniu:

THEORY1
THEORY2

THEORY1 reprezinta regulile de trecere din vorbirea directa in vorbirea indirecta atunci cind verbul introductiv este la timpul prezent. Pentru ca elevul sa invete cit mai usor, mai repede, alaturi de exemple apar si desene. Astfel, alaturi de exemplul:

Peter: "I've lost my hat!"
"What is Peter saying?"
He is saying he's lost his hat.

apare si un desen corespunzator, in care un baiat (Peter) ii spune unei fete (Mary) ca si-a pierdut palaria. Prin acest mod atractiv de invatare, elevul retine cu mai multa placere teoria. Apar subliniate in exemple pronumele, adverbele si verbele, care prezinta schimbari la trecerea in vorbirea indirecta. In cadrul primei teorii apar patru exemple complete (desene si explicatii).

THEORY2 reprezinta regulile de trecere din vorbirea directa in vorbirea indirecta atunci cind verbul introductiv este la timpul trecut. Si aici, explicatiile sint insotite de desene cit mai sugestive si, pe cit posibil, amuzante. Astfel, pentru exemplul:

Jane: "We're going to have a party tonight."
"... and Jane said that they were going to
have a party that evening."

apar in partea stinga a ecranului doua fete stind de vorba (vorbire directa), iar in partea dreapta a ecranului o fata povestindu-i alteia (vorbire indirecta). La THEORY2 apar patru exemple (desene si explicatii), care incearca sa faca cit mai clara aceasta dificila problema a trecerii din vorbirea directa in vorbirea indirecta.

La sfirsitul fiecarei teorii se afla cite doua tabele, cu verbe si cu adverbe, care sintetizeaza cunostintele invatate anterior.

Exemplu: tabelul al doilea de la THEORY1.

DIRECT SPEECH	INDIRECT SPEECH
HERE	THERE
TODAY	THAT DAY
YESTERDAY	THE DAY BEFORE
AGO	BEFORE
TOMORROW	THE NEXT DAY
NOW	THEN

Dupa ce elevul s-a familiarizat cu problema trecerii din vorbirea directa in vorbirea indirecta in ambele cazuri (cind verbul introductiv e la timpul prezent si cind verbul introductiv e la timpul trecut), el poate trece la rezolvarea exercitiilor, partea a treia.

Exista doua seturi de exercitii, iar alegerea setului dorit (1 sau 2) se face prin apasarea tastei 1 sau 2 apoi ENTER. Se cere numele utilizatorului, apoi se trece la rezolvarea exercitiilor. Fiecare set contine patru exercitii, a cite patru propozitii fiecare. Pentru fiecare propozitie din vorbirea directa se prezinta trei variante in vorbirea indirecta, iar pentru alegerea variantei corecte elevul trebuie sa apese 1,2 sau 3 apoi ENTER. Daca raspunsul dat nu este corect, pe ecran apare mesajul: "NO!!!COME BACK TO THEORY!" apoi, prin apasarea unei taste, pe ecran apar tabelele de la sfirsitul teoriei. Dupa ce elevul revede tabelele, prin apasarea unei taste ecranul se sterge si se revine la exercitiu de acolo de unde a fost lasat.

Primele doua exercitii ale fiecarui set folosesc cunostintele de la THEORY1, adica trecerea propozitiilor din

vorbirea directa in vorbirea indirecta atunci cind verbul introductiv e la timpul prezent, iar celelalte doua exercitii folosesc cunostintele de la THEORY2, adica trecerea propozitiilor din vorbirea directa in vorbirea indirecta atunci cind verbul introductiv e la timpul trecut. Cind elevul se afla la rezolvarea exercitiului 1 sau 2, daca greseste, trimiterea se face la tabelele de la THEORY1, iar cind elevul se afla la rezolvarea exercitiului 3 sau 4, daca greseste, trimiterea se face la tabelele de la THEORY2. Daca elevul da un raspuns corect din prima incercare primeste doua puncte; daca raspunsul e corect din a doua incercare primeste un punct, iar daca a facut doua incercari si nu a dat raspunsul corect, calculatorul ii indica raspunsul iar elevul nu primeste nici un punct, trecindu-se la rezolvarea propozitiei urmatoare. Indicarea raspunsului dat se face prin incadrarea intr-o culoare a acestuia.

Dupa ce elevul rezolva exercitiile se prezinta o situatie conform careia apare nota primita de elev (32 de puncte reprezinta nota 10).

RESULTS

NAME	POINTS	MARK
MIHAELA	30	9.31
PAUL	32	10

Exercitiile pot fi rezolvate de 10 elevi, eventual alternind seturile, iar daca numarul lor depaseste 10 se reinitializeaza tabelul cu rezultate.

Cele doua seturi de exercitii se afla in memorie, dar, cu mici modificari, se pot adauga si seturi care sa se poata incarca dupa dorinta de pe caseta. De asemenea, daca se dispune de o retea de calculatoare personale, cu mici modificari ale programului, acesta poate fi folosit pentru verificarea simultana a unei grupe de elevi. In acest caz timpul afectat de catre profesor verificarii va fi simtitor diminuat.

Asa cum am aratat mai sus, fiecarei propozitii in vorbire directa ii sint atasate trei variante in vorbire indirecta (una corecta, doua incorecte). Am optat pentru varianta alegerii

propozitiei corecte (1,2,3) deoarece programul se adreseaza nu numai persoanelor obisnuite cu utilizarea tastaturii unui calculator. In acest fel, orice persoana, urmind indicatiile de pe monitor, poate utiliza programul.

In orice situatie, cind calculatorul se afla in asteptare si pe ecran nu apare nici un mesaj explicit, ca de exemplu :"Press a key to CONTINUE ", programul se continua prin apasarea unei taste la alegere.

In orice situatie de oprire cu BREAK programul nu se relanseaza cu RUN ci cu GO TO 10, iar pentru reinitializarea tabelului cu rezultate cu GO TO 6.

In concluzie, se poate spune ca lucrarea aduce noutate in ceea ce priveste invatarea limbii engleze pentru ca da posibilitatea evaluarii si mai ales autoevaluarii elevului, pentru ca se include in profilul de cercetare al cercului de limba engleza si informatica al liceului, pentru ca da posibilitatea abordarii interdisciplinare a temei alese (limba engleza <=> informatica).

Conceptia de ansamblu a lucrarii imi apartine: impartirea in capitole si subcapitole. Propozitiile din set de exercitii au fost selectate din bibliografie, iar al doilea set de exercitii a fost conceput in intregime de mine. De asemenea am realizat singura intreaga parte de grafica a programului.

Lucrarea face parte din conceptia de azi privitoare la invatarea si predarea limbii engleze, iar profilul liceului faci liteara abordarea interdisciplinara a temei.

5.2. LIMBA FRANCEZA

SI CONDITIONNEL

Am vazut in subcapitolul precedent cum INFORMATICA poate ajuta la predarea si verificarea cunostintelor si la orele de LIMBI STRAINE. Programul urmator este un alt astfel de exemplu, de data aceasta realizat pentru orele de LIMBA FRANCEZA.

Programul verifica, pe baza unui set mare de exerciti, cunostintele in ceea ce priveste folosirea celor trei reguli ale lui SI-conditionnel.

Dupa incarcarea programului pe ecran va apare urmatorul meniu:

1. Exemples
2. Regles
3. Exercices

Tastind "1" vom avea afisate exemple de propozitii in care se folosesc regulile amintite. Optiunea a doua contine un tabel sintetic a acestor reguli. Aceste prime doua parti a programului sint realizate pentru ca elevul sa poata revedea teoria inaintea inceperii exercitiilor.

Optiunea "3" reprezinta verificarea propriu-zisa a cunostintelor. Ea contine 5 exercitii. La primul exercitiu se dau cite 2 verbe care trebuie introduse pe rind la timpul potrivit, conform celor trei reguli , in niste propozitii date. Introducerea se realizeaza pe baza unor modele afisate pe ecran care sintetizeaza regulile. La al doilea exercitiu nu se mai da modelul ci numai regula. Se va folosi numai regula 1. Analog se folosesc regulile 2 si 3 la exercitiile 3 respectiv 4. La ultimul exercitiu nu se mai afiseaza nici modelul nici regula. deci elevul trebuie se decida singur ce regula sa foloseasca in fiecare propozitie.

Introducerea verbelor se realizeaza cu ajutorul unui cursor care se plimba printr-un alfabet al limbii franceze care apare

in partea de jos a ecranului. Tastele Q si P deplaseaza cursorul la stinga si respectiv la dreapta , iar O introduce litera curenta. Daca litera nu e corecta apare afisat , pentru citeva momente, numarul de greseli facute pina in acel moment. Daca timpul dintre introducerea a doua litere consecutive depaseste 20 de secunde acest lucru este luat tot ca o greseala. Daca elevul nu stie litera care trebuie sa urmeze, el poate cere ajutorul calculatorului, apasind tasta ENTER, care va introduce singur urmatoarea litera. In acelasi timp in coltul dreapta sus este afisat numarul de litere cerute, ca ajutor, de elev.

Dupa fiecare exercitiu apare un tabel cu rezultatele fiecarui elev : numarul de greseli si numarul de ajutoare , rezultate care ajuta profesorul la evaluarea notelor elevilor.

Programul poate fi folosit fie in cadrul orei in care se predau regulile lui SI-conditionnel, pentru a fixa cunostintele (exercitiile 1, 2, 3 si 4) sau in ora urmatoare, pentru verificarea pregatirii elevilor (exercitiile 2, 3, 4 si 5).

2.tomber entrer

Si tu tombes malade,tu entrerais à l'hôpital.

Si tu tombais malade , tu entrerais à l'hôpital.

Si tu é ... . malade , tu .... à l'hôpital.

CAPITOLUL 6
GEOGRAFIE

Este deosebit de important sa nu reducem folosirea calculatorului doar la materiile cu specific real ci sa incercam sa-l folosim si la materii de cultura generala. Un astfel de exemplu de utilizare a calculatorului il constitue programul "VULCANI".

Programul cuprinde intr-un mod sintetic intreaga materie de la capitolul respectiv din manualul clasei a IX-a de liceu. Mai mult, prin ceea ce cuprinde, programul depaseste cadrul manualului putind fi folosit si la cercurile de elevi pentru a prezenta intr-un mod nou si atractiv aceasta tema.

Programul este compus din doua mari parti care pot fi incarcate si rulate si separat, conform necesitatilor impuse de predarea temei respective: prima parte "FENOMENUL VULCANIC", a doua parte "VULCANII TEREI". Programul a fost conceput pentru calculatorul Spectrum 128K avind nevoie de memorie suplimentara destul de mare. A fost folosit in liceu la clasele a IX-a la orele recapitulative de la capitolul care trateaza aceasta tema. El poate fi folosit si individual de posesorii de astfel de calculatoare cu scopul de a se autoinstrui, de a-si reimprospata cunostintele sau de a capata noi cunostinte.

In incheierea acestei parti introductive am vrea sa remarcam ca utilizarea calculatorului in lectie nu inseamna "inlocuirea" profesorului,"subminarea" autoritatii lui de catre calculator. Profesorul a fost si va ramine profesor la clasa. Metodele de predare insa se vor schimba, si una din aceste schimbari este tocmai folosirea calculatorului in lectie.

6.1. FENOMENUL VULCANIC

Prima parte a programului se imparte si ea in doua: o parte teoretica care explica prin imagini sugestive fenomenul vulcanic si un joc in care sint utilizate majoritatea notiunilor noi intilnite in partea teoretica.Pentru incarcarea programului se tasteaza LOAD "" si se porneste casetofonul. In primul rind se va incarca programul "INCARC 1" care gestioneaza incarcarea apatru parti din primul program: un SCREEN$ care ramine pe ecran tot timpul incarcarii; apoi doua parti de BYTES numite "p1" si

"p2" care contin, concatenate, cite 4 SCREEN$-uri, deci fiecare are 6912 x 4 bytes; in final se incarca programul "BASIC 1" care se autolanseaza in executie aparind:

OPTIUNI

1 - structura interna a pamintului
2 - tectonica globala
3 - relieful si fenomenul vulcanic

---

4 - vulcanograf

In acest moment poate fi aleasa una din optiunile 1,2 sau 3.Daca se alege optiunea 4 atunci calculatorul intra in regim de incarcare (LOAD) pentru incarcarea primului joc (VULCANOGRIF).

OPTIUNEA 1 - structura interna a pamintului : apare schema structurii interne a pamintului cu elementele componente, iar in dreapta jos o lista de optiuni. In cele doua linii de jos ale ecranului se vor derula informatiile privind cele 4 parti componente ale pamintului: nucleul intern,nucleul extern,mantaua si scoarta (fig.1). Apasind C se va trece la urmatoarea secventa iar cu O se revine la OPTIUNI.

Secventa urmatoare cuprinde informatii despre *structura scoartei continentale si oceanice* (fig.2). Modul de lucru este indicat analog intr-o lista de optiuni din coltul din dreapta jos a ecranului.

OPTIUNEA 2 - tectonica globala: prezinta impartirea suprafetei globului terestru in placi tectonice (fig.3) si in continuare (optiunea C) ASTENOSFERA (fig.4).

OPTIUNEA 3 - relieful si fenomenul vulcanic: intr-o prima imagine este prezentat APARATUL VULCANIC cu elementele componente: VATRA VULCANULUI, COSUL, CRATERUL. Apasind succesiv o tasta oarecare sint indicate pe rind aceste elemente. Apasind tasta C se trece la o sinteza a activitatii vulcanice iar in continuare sint prezentate descompus FAZELE ERUPTIEI iar la alegerea optiunii M fazele sint prezentate animat. Miscarea poate fi oprita tastind E[xit]. Din acest punct se poate reveni la explicatii (X) sau la optiuni (O). Alegind:

OPTIUNEA 4 - apare mesajul "PORNESTE CASETOFONUL pentru

incarcarea jocului". Prin incarcarea jocului prima parte se distruge; poate fi revazuta doar prin reincarcarea programului de pe caseta.

6.1.2. VULCANGRIF

Jocul propune elevului care este in fata ecranului sa reconstitue o grila in care se afla cifre (0-9) si caractere speciale (+;-;,;/;*;.). Elevul trebuie sa inlocuiasca aceste cifre si caractere cu litere, obtinind astfel pe fiecare linie din grila cite un cuvint care a fost intilnit in prima parte teoretica iar in final pe verticala A-B se va obtine tot un cuvint din domeniul activitatii vulcanice (TECTONICA).

Pentru completarea grilei se poate proceda in doua moduri:
-studiind frcventa aparitiei vocalelor (se stie ca in limba romana cele mai frcvente litere sint A,E,I,...),sau
-pornind intuitiv (cel mai cunoscut fenomen legat de vulcani este ERUPTIA) deci se cauta cuvintul ERUPTIE.

Dupa completarea grilei la "Apasa o tasta" se trece la incarcarea partii a doua a programului:

6.2.1. VULCANII TERREI

La pornirea casetofonului se incarca un program incarcator numit "INCARC 2" care va gestiona incarcarea urmatoarelor parti: doua de bytes numite "p3" si "p4" continind ca si "p1" si "p2" cite 4 SCREEN$-uri si programul "BASIC 2" care gestioneaza aceste SCREEN$-uri. Acesta se autolanseaza dupa incarcare si apare o lista de

OPTIUNI

1 - America de sud
2 - America centrala
3 - America de nord
4 - Oceania
5 - Asia
6 - Africa
7 - Europa
8 - ROMANIA
9 - ZONE VULCANICE

0 - test geografic

Alegind una din optiunile 1-7 sint prezentate continentele respective, cu o lista de optiuni (O,C,sus,jos) iar in partea de jos, in ultimele doua rinduri apar: numele vulcanului indicat,tara,inaltimea,anul ultimei eruptii,daca este activ (A) sau stins (S).

OPTIUNEA 8 - prezinta fenomenul vulcanic in tara noastra: cele doua grupe vulcanice, de nord si de sud, precum si caracteristicile lor.

OPTIUNEA 9 (ZONE VULCANICE) - prezinta principalele zone vulcanice active de pe TERRA (se utilizeaza aceleasi optiuni deja prezentate).

6.2.2. TESTHT

OPTIUNEA 0 permite incarcarea ultimei parti a programului - un joc sub forma unui test geografic.

Programul se numeste TESTHT si are introdusa si o rutina de sintetizare a vocii. Cele 14 cuvinte de pe orizontala se pot deplasa stinga-dreapta folosind sagetile astfel incit pe verticala insemnata sa apara numele dorit. La apasarea tastei ENTER este considerat numele inscris in acest moment pe verticala. Sint permise maxim 5 incercari dupa care calculatorul arata el cele doua moduri de formare a numelui cautat. Si in cazul formarii corecte a numelui inaintea epuizarii celor 5 incercari permise,calculatorul arata cele doua moduri de formare a numelui,bineinteles neuitind sa-l felicite pe cel din fata ecranului.

Am incercat sa realizam prin acest program o apropiere intre geografie, si informatica. Avantajele folosirii calculatorului pe care am incercat sa le punem in evidenta sint: o prezentare sintetica a materiei respective, ilustrarea prin imagini atractive, posibilitatea de a revedea oricare din schemele prezentate,realizarea unor elemente de animatie, jocurile din finalul fiecarei parti care servesc la fixarea notiunilor nou introduse. Un alt mare avantaj este urmatorul: elevii interesati in studiul acestui capitol si care au acces la un calculator pot folosi acest program la studiu individual.

In scoala au fost realizate si alte programe care pot fi

folosite la orele de geografie sau in cadrul cercurilor de elevi. Astfel programul "EVOLUTIA CONTINENTELOR" prezinta repartizarea uscatului si a apei pe TERRA in evolutia lor impreuna cu etapele aparitiei vietii pe pamint; totul este prezentat prin elemente de animatie pe calculator. O alta lucrare numita "RELIEFUL CARSTIC " prezinta structura ,formarea, caracteristicile pesterilor. Are de asemenea o parte care prezinta statistic cele mai lungi pesteri din lume,cele mai adinci pesteri din lume,precum si citeva recorduri in domeniu.

Pentru programul "VULCANII" pot fi imaginate unele extensii si modificari care au ca scop imbunatatirea lui. Cele 16 SCREEN$-uri totalizeaza 16 x 6912 = 110592 bytes ,deci aproximativ 110 K memorie (foarte mult),ceea ce a necesitat impartirea programului in doua parti. Utilizind insa o rutina in cod masina pentru compactarea SCREEN$-urilor (vezi cap.10) si o alta pentru decompactarea pe ecran, se obtin economii substantiale de memorie (in medie economii de 35-40%) deci cele 16 SCREEN$-uri ar fi incaput pe aproximativ 70 K. In acest caz ar fi incaput in memorie si cele doua jocuri,fara sa fie nevoie de o incarcare de pe caseta in momentul utilizarii lor. De asemenea cele 4 programe BASIC 1,VULCANGRIF,BASIC 2 si TESTHT pot fi scurtate utilizind conventiile de reprezentare cunoscute:

10 ocupa 8 bytes ----> VAL "10" ocupa 5 bytes
deci o economie de 3 bytes

Analog se pot folosi :

0----> BIN
1----> SGN PI sau NOT BIN
3----> INT PI

Pot fi concepute pe aceeasi idee si alte jocuri,cu alti termeni care pot fi alese printr-un meniu. Ambelor jocuri li se poate atasa o rutina de contorizare a timpului si de punctare pentru a putea stabili o ierarhie intre diferiti jucatori.

Dezavantajul acestui set de programe il constituie faptul ca programele principale BASIC 1 si BASIC 2 sint concepute pentru varianta 128 K a calculatorului SPECTRUM ,deci nu pot fi folosite pe calculatoare TIM-S. Cu modificari putine si eventual cu inca o subimpartire a programelor acest lucru devine posibil. Jocurile VULCANGRIF si TESTHT pot fi incarcate si separat atit pe SPECTRUM 128 cit si pe TIM-S.

CAPITOLUL 7
BIOLOGIE

7.1. CELULA VEGETALA

Am vazut in capitolele precedente cum INFORMATICA ajuta la predarea si fixarea cunostintelor din diferite stiinte.Dar dintre toate materiile de invatamint care se predau in liceu si in scolile generale, BIOLOGIA este unul din cele mai bune exemple in sensul observarii avantajelor aduse de calculator:autoinstruirea,autoverificarea,animarea unor procese etc.

In acest context am ales un program care urmareste doua dintre acest aspecte:verificarea si fixarea cunostintelor si predarea cu ajutorul calculatorului.

Prima parte a programului se refera la lectia STRUCTURA SI ULTRASTRUCTURA CELULEI VEGETALE din manualul de clasa a IX-a. Dupa ce profesorul a predat lectia el poate folosi acest program fie in cadrul aceleiasi ore,pentru a fixa elevilor termenii noi care apar,fie in ora urmatoare pentru a-i asculta pe elevi. Vom alege cazul al doilea si vom arata cum decurge o astfel de ora de biologie.

Dupa incarcarea programului,pe ecran va aparea ultrastructura celulei vegetale pe care se observa toti componentii acesteia:perete celular,membrana,nucleul,citoplasma,mitocondriile si altele(fig.1).Dupa apasarea unei taste vom avea afisat meniul (fig.2):

1 STRUCTURA CELULEI
2 DIVIZIUNEA MITOTICA

Prin apasarea tastei 1 ajungem la partea programului care ne intereseaza.Pe ecran avem din nou structura celulei iar intr-o parte apare prima intrebare.Fiecareintrebare are urmatoarea forma:se dau niste indicatii cu privire la rolul sau functiile in celula a componentului cautat;urmeaza trei raspunsuri posibile din care elevul trebuie sa-l aleaga pe cel corect.Prima intrebare are urmatorul enunt:

"CONSTITUENT FUNDAMENTAL AL CELULEI
CARE II CONFERA FORMA PROPRIE.

1 NUCLEUL

2 MEMBRANA

3 CITOPLASMA "

In acelasi timp o sageata indica pozitia componentului cautat pe imaginea celulei(fig.3).

Elevul trebuie sa tasteza 1,2 sau 3 alegind astfel unul din cele trei raspunsuri posibile.Calculatorul analizeaza raspunsul si afiseza in coltul din stinga sus daca elevul a stiut sau daca a gresit,indicind varianta corecta precum si numarul de raspunsuri corecte si gresite(fig.4 si fig.5).Apoi se trece la intrebarea urmatoare unde se lucreaza analog.

Programul contine noua intrebari dar numarul lor poate fi marit usor.Pentru fiecare raspuns corect elevul primeste un punct,plus un punct din oficiu,la sfirsitul setului de intrebari afisindu-se rezultatul final si nota obtinuta de elev pentru acest exercitiu.

Bine-nteles profesorul poate sa-l puna pe elev sa-si motiveze raspunsurile pentru a fi sigur ca acesta nu "ghiceste" solutiile,ca apoi,pe baza notei date de calculator si a celorlalte lamuriri date de elev,profesorul sa-i dea nota cuvenita.

Acesta parte a programului poate fi folosita de catre elev si fara ajutorul unui profesor,adica ca o autoverificare,dupa ce a invatat lectia.

A doua parte este un program de predare a biologiei pe calculator.A fost aleasa lectia "DIVIZIUNEA MITOTICA" din acelasi manual.

Cind calculatorul afiseaza meniul (fig.2) se apasa tasta 2. Pe ecran va aparea o celula la inceputul diviziunii precum si fazele acesteia(fig.6).Un cursor alb ne va spune ca sintem la interfaza.Apasind cite o tasta vom trece prin toate fazele diviziunii mitotice,forma celulei din stinga modificindu-se analo (fig.7 si fig.8).Tinind o tasta apasata in continuu obtinem o animatie care prezinta diviziunea celulei,trecind prin toate fazele,pina la formarea celulelor noi.Acesta este marele avantaj adus de calculator,animatia,deoarece nici unul din mijloacele actuale de predare nu poate reda miscarea (doar uneori un microscop dar pentru o experienta se pierde un timp pretios din cele 50 de minute ale orei).

Diviziunea poate fi vizionata de ori cite ori,profesorul fiind obligat sa insoteasca acesta trecere in revista a fazelor

prin explicatii exacte la fiecare din aceste momente.

Dupa cum apare afisat si pe ecran,apasind simultan tastele CAPS SHIFT si W programul se va reintoarce la meniu.

Aceasta parte poate fi folosita si de catre elev singur pentru a invata lectia, fara profesor (eventual cu un manual in mina),adica programul poate fi folosit pentru autoinstruire.

Dupa cum am mai precizat,programul poate fi imbunatatit sau completat dupa placul fiecaruia sau.pornind de la el,se pot realiza programe pentru alte lectii de biologie din manualele scolare.In acest sens consideram ideala colaborarea unui iubitor de biologie cu un elev pasionat de calculatoare (eventual membru al cercului de informatica din scoala).

Speram ca acest program va va convinge ca informatica poate ajuta si la predarea sau verificarea cunostintelor de biologie si ca propriile dumneavoastra programe in acest domeniu sa impu-

CAPITOLUL 8

P.D.E.F.

METROLOGIA DURITATII

Capitolul de fata prezinta un program de calcul al caracteristicilor metrologice ale mostrelor etalon de duritate.

Programul de calcul a fost solicitat de catre Institutul National de Metrologie - Laboratorul Duritati, dar poate fi folosit si in scop didactic la lectiile de Prelucrarea datelor experimentale in fizica sau la disciplinele de tehnica masurarii de la clasele de metrologie.

8.1. Duritatea - caracteristica de material

Introdusa din necesitati tehnologice,incercarea de duritate a devenit una dintre incercarile de materiale frecvent utilizate in industria constructoare de masini.

Duritatea reprezinta rezistenta opusa de materiaul la patrunderea unui corp de o anumita forma, numit penetrator, sub actiunea unei anumite forte,numita sarcina; si se determina pe baza amprentei ramase pe material ca urmare a deformarii plastice a materialului.

In functie de tipul penetratorului,marimea sarcinii de incercare si dimensiunea caracteristica a amprentei, in prezent se cunosc si se practica fiind standardizate, atit pe plan national cit si pe plan mondial, mai multe metode de incercare a duritatii cu mai multe scari de duritate. Acestea sint:

8.1.1.Incercarea de duritate Rockwell

Conform STAS 493-81 si STAS 10703-86 in tabelul

i sint prezentate scarile de duritate Rockwell cu elementele lor definitorii.

8.1.2. Incercarea de duritate superficiala Rockwell

Conform STAS 8525-84, elementele definitorii ale scarilor corespunzatoare acestei metode sint prezentate in tabelul 2.

8.1.3. Incercarea de duritate Brinell

Conform STAS 165-83 scarile de duritate Brinell uzuale si elementele lor definitorii sint prezentate in tabelul 3.

8.1.4. Incercarea de duritate Vickers

Conform STAS 492/1-85, STAS 492/2-85 si STAS 7057 -78 scarile de duritate Vickers cu elementele lor definitorii sint prezentate in tabelul 4.

Tabelul 1

Scara de duritate	Penetratorul	Sarcina de incercare F(N)		Dimensiunea caracteristica a amprentei
		initiala	totala

V 0,1	Idem	0,9807	Idem

8.2.Mostre etalon de duritate

8.2.1.Domeniu de aplicare

Mostrele etalon de duritate sint destinate verificarii aparatelor pentru incercarea duritatii conform STAS 7169-82 si 9115-81.

8.2.2. Definitie

Mostrele etalon de duritate sint conform STAS 7170-87,masuri cu valoare unica prin care se materializeaza puncte ale scarilor de duritate standardizate. Ele se realizeaza din oteluri cu structura omogena si stabila. Duritatea nominala li se atribuie pe baza etalonarii cu aparate etalon corespunzatoare.

8.2.3.Caracteristicile metrologice

Definitiile,simbolurile si ecuatiile caracteristicilor metrologice sint prezentate in STAS 7170-87.

8.2.4.Conditii impuse

Mostrele de duritate se admit ca etaloane si se in-

cadreaza in clase de precizie conform tolerantelor impuse de STAS 7170-87.

6.3. Structura programului

La diferitele scari de duritate se poate ajunge prin intermediul unui meniu principal care apare la inceputul rularii programului.Programul este format din 8 subrutine principale.

Rezultatele pot fi afisate pe imprimanta Robotron K6313 si prezentate prin documente conform normelor metrologice in vigoare.

Programul bineinteles poate fi imbunatatit.De exemplu pentru extragerea datelor pe alte tipuri de imprimante.

CAPITOLUL 9
INFORMATICA

9.1. TRANSLATOR BASIC-PASCAL

O importanta deosebita in informatica se acorda limbajelor de programare, element esential in construirea programelor de orice fel.

CALCULATORUL OPEREAZA CU DATE. In acest domeniu, aparitia limbajului COBOL este semnificativa, introducindu-se o diviziune explicita pentru descrierea datelor, paralel cu o diviziune de procedura. Pe linia facilitatilor de structurare a datelor se inscrie si limbajul PASCAL - ca si toate cele care se inspira de la el.

N.Wirth afirma ca limbajul PASCAL - al carui "inventator" este - are doua scopuri principale: in primul rind realizarea unui limbaj convenabil pentru predarea programarii ca o diciplina sistematica ,bazata pe anumite concepte clare si care sa rflecte in mod natural in limbaj;in al doilea rind realizarea unui limbaj a carui este fiabila si eficienta pe calculatoarele existente.

In contextul raspindirii acestui limbaj apare ca o necesitate fireasca marirea vitezei de rulare a programului.

Lucrarea ,referinduse la calculatoarele HC-85,TIM-S ,COBRA,ZX SPECTRUM si cele compatibile ,are drept scop traducerea programelor BASIC(cu mici restictii) si implicit marirea vitezei de executie de circa 60 de ori in fisiere ce reprezinta programe sursa PASCAL ce pot fi compilate cu programul HP4TM16 - compilatorul de PASCAL de pe aceste calculatoare.

Programul TRANSCODER a fost conceput pentru utilizare in mod special in invatamint astfel incit poate traduce o gama larga de instructiuni BASIC.Sint traduse si unele instructiuni grafice ca de exemplu PLOT,DRAW.Pentru marirea porcabilitatii au fost prevazute si instructiuni mai rar folosite ca de pilda BEEP,OUT, REM,POKE,COPY etc.

Modul de lucru:se tasteaza LOAD"TRANSCODER",dupa care un mic program BASIC se va incarca,autolansinduse si incarcind la rindul lui programul propriu-zis(in cod masina Z80).RAMTUP-ul se va fixa la valoarea 49999,raminind suficienta memorie si pentru

programe mai voluminoase.

Dupa incarcare programul curata prin NEW toata memoria pina la RAMTOP.Din acest moment controlul este redat utilizatorului pentru asi tasta sau incarca programul BASIC.

La terminarea operatiei se tasteaza RANDOMIZE USR 50000, prin aceasta apelindu-se translatorul care va raspunde printr-un mesaj si va incepe traducerea, mentionind si pasii pe care-i face:

"1.CHANGE IN UPPER CASE" - transforma toate comentariile si numele de variabile in litere mari, lucru fara importanta pentru programul BASIC dar esential pentru PASCAL din cauza faptului ca acesta trateaza variabilele omonime dar scrise cu litere mari si mici drept diferite.

"2.FORM VARIABLE TABLE" - formeaza tabelele de variabile necesare programului PASCAL pentru declaratii de tip VAR. Variabilele numerice sint considerate REALE, ca si in BASIC, variabilele simple de tip caracter sint formate dintr-o litera urmata de litera "S" (string) si sint declarate ca fiind ARRAY[1..64] OF CHAR;

Se vor afisa variabilele folosite de catre program.

"NAME OF PROGRAM ? " - este optiunea ceruta de catre translator , asteptind sa introduceti un nume de program (max.9 caractere) reprezentind numele programului PASCAL declarat prin instrunctiunea neexecutabila PROGRAM (nume);

Dupa aceasta se listeaza partea din programul sursa PASCAL reprezentind partea de declaratii. Interactivitatea se mentine prin intermediul optiunii:

"TRANSLATE GRAPHICS ?" - la care utilizatorul poate raspunde cu (Y/N)(Yes/No) insemnind includerea sau nu in textul sursa PASCAL a declaratiilor procedurilor PLOT,DRAW,CIRCLE.

La urmatoarea optiune:

"IGNORE NONSENSE?" - se poate raspunde in mod analog insemnind ignorarea sau nu la traducere a instructiunilor incoprehensibile (de pilda CLOSE #4). Ignorarea face ca la traducere fiecare instructiune de acest fel sa fie "sarita" cu urmari, desigur imprevizibile. In caz de eroare de sintaxa la care s-a cerut optiunea de oprire cursorul de editare se va opri pe linia care a cauzat eroarea.

In continuare, programul PASCAL este listat, dupa care se cere optiunea de salvare pe caseta. Odata salvat, programul poate fi

incarcat de catre HP4TM16 ca si cum ar fi fost un program salvat cu editorul compilatorului, compilat, rulat, listat, modificat etc.

Nota: In oricare faza a traducerii, programul poate fi oprit apasind tasta <STOP> cu ajutorul facilitatilor oferite de catre sistemul de intreruperi, modul 2.

In continuare dam unele echivalente in PASCAL a unor instructiuni si functii BASIC:

BASIC	PASCAL
BEEP a,b	BEEP (a,b)
CIRCLE a,b,c	CIRCLE (a,b,c)
OUT a,b	OUT (a,CHR(b))
STOP	HALT
NEW	USER(#11B7)
REM coment.	{ coment. }
FOR a=b TO c STEP d	a:=b;WHILE a*SGN(d)<=c*SGN(d)
:	DO BEGIN
:	:
NEXT a	a:=a+d END;
GO TO n	GO TO n
LET a=b	a:=b
PAUSE a	PAUSE (a)
POKE a,b	POK (a,b)
PLOT a,b	PLOT (a,b)
IF cond THEN...	IF cond THEN BEGIN ... END
CLS	PAGE
DRAW a,b	DRAW (a,b)
COPY	COPY
etc.	
RND	RND
INKEY$	INCH
SIN	SIN
ATN	ARCTAN
SQR	SQRT
SGN	SGN
PEEK	PEK
etc.	

Fie programul BASIC:

```
10 INPUT "N=";N
20 LET S=0 : LET I=0
30 IF I>N THEN STOP
40 LET S=S+I
50 PRINT S
60 LET I=I+1
70 REM INCHIDE BUCLA
80 GO TO 30
```

Acesta va genera urmatorul dialog:

```
RANDOMIZE USR 50000   <ENTER>

BASIC - PASCAL TRANSLATOR
(C) 1988 SINGER HARALD
TIMISOARA tel. 961/50395

1.CHANGE IN UPPER CASE
Ok
2.FORM VARIABLE TABLE
Ok

0 OK 80;1
```

Detalii de programare:

Programul este scris in limbaj Z80. Memoria (incepind de la adresa 50000), este ocupata astfel: translatorul incepe de la adresa 50000. Adresele tabelelor de variabile se gasesc in locatiile 65520, 65522, 65524 care joaca rolul de pointeri pentru zona de variabile, variabile sir, tablouri.

Textul PASCAL generat se afla la adresa continuta in locatiile 65516, 65517, de regula 58000.

Programul lucreaza cu modul de intrerupere 2, astfel ca poate fi oprit oricind.

Rutine importante:	Efect
PUTMEM	(DE):=A
PUTMEB	(HL):=A
	B:=B-1
	HL:=HL+1
	pina cind B=0
RST #10	tiparire caracter din reg.A
WRITET	A:=(HL)
	tipareste caracterul din reg.A
	B:=B-1
	HL:=HL+1
	pina cind B=0
RST #08	opreste programul cu

```
DEFB n                  eroarea BASIC n+1
JPSPAC                  sare peste spatiile
                        din programul BASIC
NEWLIN                  genereaza numarul de linie
                        pentru o noua linie PASCAL
EXPTRA                  traduce expresia de la adr.(HL)
LLIST                   listeaza programul PASCAL pina
                        la primul caracter = 255
```

In programul PASCAL cuvintele rezervate sint tokenizate (fiecarui cuvint cheie ii corespunde un cod ASCII).

Dam mai jos codurile pentru unele cuvinte rezervate:

BEGIN=152	CONST=131	DO=145	ELSE=146
END=144	FOR=150	FORWARD=157	FUNCTION=133
GO TO=154	IF=151	LABEL=161	PROGRAM=129
REPEAT=147	THEN=142	TO=140	TYPE=159
PROCEDURE=132	UNTIL=143	VAR=138	WHILE=149

Formarea tabelelor de variabilesi de etichete se face printr-o scanare a textului BASIC care incepe la adresa continuta in variabila sistem PROG (23635-23636) pina la adresa continuta in variabila sistem VARS (23627-23628). Odata cu aceasta se verifica si textul BASIC in ceea ce priveste translatabilitatea instructiunilor continute in program.

Instructiunea 'IF' fiind tradusa prin 'IF cond THEN BEGIN...END;' apare desigur problema imbricarii in cadrul programului BASIC a acestordeclaratii. Problema este solutionata de catre translator prin contorizarea numarului de instructiuni 'IF' ce apar in aceeasi linie. La intilnirea caracterului <CR> (CHR$(13)), translatorul genereaza suplimentar un numar de separatori 'END' egal cu numarul 'IF-urilor' imbricate.

Instructiunile PLOT si DRAW au echivalente in PASCAL:

```
PROCEDURE PLOT(X,Y:INTEGER);
  BEGIN INLINE (#FD,#21,#3A,#5C    (LD IY,#5C3A)
    ,#DD,#46,#02,#DD,#4E,#04,#CD   (LD B,(IX+2);LD C,(IX+4))
    ,#E5,#22);                     (CALL #22E5)
  END;                             (subrutina PLOT din ROM)
```

```
PROCEDURE DRAW(X,Y:INTEGER);
  VAR SGNX,SGNY:INTEGER;
  BEGIN
    IF X<0 THEN SGNX:=-1
           ELSE SGNX:=1;
    IF Y<0 THEN SGNY:=-1
           ELSE SGNY:=1;
    LINE (ABS(X),ABS(Y),SGNX,SGNY)
  END;

PROCEDURE LINE(X,Y,SX,SY:INTEGER);
  BEGIN INLINE (#FD,#21,#3A,#5C,  {LD IY,#5C3A)
    ,#DD,#56,#02,#DD,#5E,#04,#DD  {LD D,(IX+2);LD E,(IX+4))
    ,#46,#06,#DD,#4E,#08,#CD,#BA  {LD B,(IX+6);LD C,(IX+8))
    ,#24);                        {CALL #24BA)
END;                              {subrutina DRAW din ROM)
```

De asemenea si unele functii au trebuit sa fie definite:

```
FUNCTION RND (X:REAL):REAL;
  BEGIN
    RND:=(RANDOM/256)
END;

FUNCTION SGN (X:REAL):INTEGER;
  BEGIN
    IF X=0 THEN SGN:=0
           ELSE SG:=X/ABS(X);
END;

FUNCTION PEK (X:REAL):INTEGER;
  VAR ADR:INTEGER;
      AD :REAL;
  BEGIN
    IF ENTIER(X)>32767 THEN ADR:=ENTIER(X)-65536
                       ELSE ADR:=ENTIER(X);
    PEK:=ORD(PEEK(ADR,CHAR))
END;
```

```
FUNCTION IN (X:REAL):INTEGER;
  BEGIN
    IN:=ORD(INP(ENTIER(X)))
END;

PROCEDURE POK(X,Y:REAL);
  VAR I,J:INTEGER;
  BEGIN
    IF ENTIER(X)>32767 THEN I:=ENTIER(X)-65536
                       ELSE I:=ENTIER(X);
    POKE(I,CHR(ENTIER(Y)))
END;
```

9.2. SUBRUTINE UTILITARE

In acest subcapitol doriu sa va prezentam citeva programe, fie in BASIC, fie in limbaj masina, care incearca sa imbunatateasca performantele calculatoarelor de tip TIM-S,HC-85. Ele pot fi folosite ca subrutine in propriile dumneavoastra programe.

In continuare va fi descrise fiecare subrutina in parte. Ele se refera, in special la scrierea pe 64 de coloane, la lucrul cu ferestre, la compactarea SCREEN-urilor sau la utilizarea diferitelor imprimante: ROMOM, ROBOTRON sau SCAMP.

9.2.1. LLIST ROMOM

In multe configuratii a calculatorului TIM-S intra si imprimanta paralela ROMOM. Se cunoste ca, din pacate, in mod obisnuit nu se pot folosi toate facilitatile acestei imprimante.

De aceea am conceput aceasta subrutina, in limbaj masina, simpla si usor de utilizat. Cu ajutorul ei la ROMOM se poate scrie cu trei seturi de caractere:normale, inclinate si ingrosate fiecare in trei marimi: 80, 100 sau 120 caractere pe rind.Deci se pot obtine 9 scrieri diferite.

Rutina se incarca la adresa 59998, are o lungime de 390 de octeti si NU este relocatabila. Se incarca prin instructiunea LOAD "" CODE iar apoi se lanseaza prin RANDOMIZE USR 60000 dar numai dupa ce sa pornit imprimanta. Aceasta lansare pozitioneaza capul de scriere la inceputul rindului urmator, seteaza setul american de caractere si se autodefineste ca subrutina pentru tiparirea caracterelor la imprimanta. Dupa lansare orice LPRINT sau LLIST va folosi aceasta subrutina.

Pentru a apela diferite tipuri de scris se vor folosi instructiunile PAPER si INK cu urmatoarele efecte:

INK 1 - 80 caractere pe rind

INK 2 -100 caractere pe rind
INK 3 -120 caractere pe rind

PAPER 1 -scris normal
PAPER 2 -scris inclinat
PAPER 3 -scris ingrosat

Deci pentru a obtine un text scris cu cu caractere inclinate cu 100 caractere pe rind tastati LPRINT PAPER 2; INK 2;"TEXT PENTRU TIPARIT". Toate scrierile la imprimanta care vor urma vor fi scrise cu acest fel de caractere pina cind se introduce din nou o astfel de instructiune.

Tipul de scris poate fi modificat (pentru listare) si in cadrul unei linii prin folosirea codurilor de culori:

EXTENDED MODE + o tasta de la 1 la 3 - INK c
EXTENDED MODE + CAPS + o tasta de la 1 la 3 - PAPER

De asamanea se poate controla lungimea liniei de tiparire. Se stie ca o linie la imprimanta are 600 de pixeli. Daca se doreste tiparirea pe "n" pixeli ("n"<600) se introduce valoarea "2*n" in locatiile 59998/59999. De exemplu pentru n=480 avem 2*n=960 deci tastati POKE 59998,192 si POKE 59999,3.

Subrutina poate fi folosita cu succes si in alte programe, cum ar fi de exemplu GENS, MONS ,PASCAL, BETA-BASIC, C, ZEUS etc. Acesta carte a fost pregatita cu ajutorul acestei subrutine cu ajutorul careia s-au listat programele BASIC, s-au listat textele sursa GENS si s-a tiparit teoria.

9.2.2. LPRINT ET

Adesea avem nevoie de texte tiparite intr-un numar destul de mare de exemplare. Se stie ca cel mai indicat este folosirea unui editor de texte (TASSWORD, ET sau LAST WORD). Dar acestea nu au o subrutina adecvata pentru scrierea la imprimanta ROMOM. De aceea am realizat acest program care listeaza in forma dorita un fisier ET.

Dupa incarcarea programului cu LOAD "" se urmaresc instructiunile si optiunile de pe ecran. Programul foloseste pentru tiparire subrutina LLIST ROMOM (vezi 9.2.1.) si inca 4 mici subrutine limbaj masina listate alaturi. Programul permite alegerea formei caracterelor precum si a numarului de linii la care se va tiparii textul.

Programul poate fi modificat si pentru alte imprimante prin schimbarea subrutinei de tiparire.

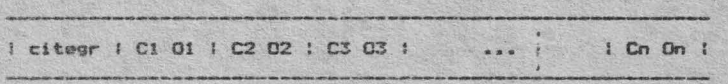
9.2.I. COMPACT SCREEN$

Se stie ca un ecran complet (SCREEN$) ocupa 6912 baiti (6144 informatii + 768 atribute). De multe ori este necesar ca intr-un program sa existe mai multe SCREEN$-uri, pregatite din timp cu un produs adecvat (ART STUDIO, ARTIST, etc.). In acest caz insa spatiul de memorie ocupat de SCREEN$-uri ar fi prea mare; de ex. pentru 4 SCREEN$-uri 27648 baiti, ceea ce lasa doar aproximativ 13 K liberi pentru programul BASIC. Este necesara deci memorarea acestor SCREEN$-uri intr-o forma compactata.

Programul COMPACT SCREEN$ realizeaza aceasta compactare la nivel de octet, contorizind numarul de octeti consecutivi identici si memorind contorul respectiv si valoarea octetului. In final se memoreaza in primii doi octeti ai zonei numarul de grupe astfel realizat.

Imaginea unui SCREEN$ compactat in memorie:



50000 50002 50004 50006 50000+2*n

Forma de compactare permite restaurarea SCREEN$-ului pe acelasi cale. Schema logica a restaurarii SCREEN$-ului:

Corectitudinea algoritmilor de compactare si restaurare a fost testata prin realizarea programelor BASIC respective, compactarea si restaurarea decurgind lent, apoi au fost realizate rutinele respective in cod masina. Rutina de compactare are 160 baiti iar cea de restaurare 52 baiti, putind fi eventual scurtate. Prima a fost asamblata la adresa 65324 iar a doua la 65484.

Pentru realizarea restaurarii unui SCREEN$ compactat, incarcat la adresa ADR trebuie realizat:

```
POKE 65494,ADR+2-256*INT((ADR+2)/256)
POKE 65495,INT((ADR+2)/256)
POKE 65498,ADR-256*INT(ADR/256)
POKE 65499,INT(ADR/256)
```

apoi, normal:

```
RANDOMIZE USR 65484. (vezi programul "ex.decomp")
```

Obs. Exista SCREEN$-uri pentru care aceasta metoda de compactare nu da rezultate bune, zona ocupata de SCREEN$-ul compactat fiind mai mare de 6912 baiti. In acest caz, evident, se renunta la compactare.

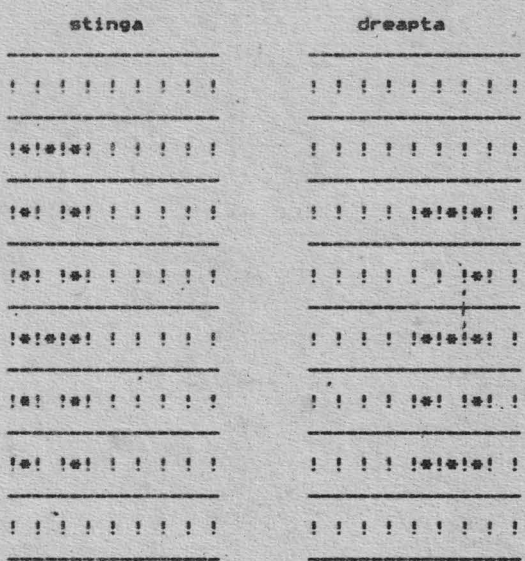
9.2.4. 64coloane

Se poate realiza o scriere pe 64 coloane si fara a folosi produsele specializate (BETA BASIC, MEGA BASIC, etc.).

Acest lucru se realizeaza foarte usor prin generarea a doua seturi de caractere (stinga, dreapta), fiecare caracter ocupind in acest caz doar jumatate din caracterul normal BASIC Spectrum.

Exemplu:



Prin suprapunerea a doua astfel de caractere (par, impar), folosind OVER 1 se va realiza scrierea simpla pe 64 coloane. Cele doua seturi ocupa 1536 baiti (2*768).

Programul 64col64000 indica doua moduri de utilizare a acestor seturi avind acelasi efect:scrierea pe 64 coloane. In primul caz se calculeaza pentru fiecare caracter setul din care face parte si se realizeaza extragerea lui. Din cauza calculelor acest mod de scriere este mai lent. In cel de-al doilea caz scrierea se face mult mai rapid prin incarcarea celor doua seturi la adrese care necesita doar schimbarea continutului variabilei 23607, pe de o parte, iar pe de alta parte prin realizarea scrierii cu pasul 2 luind alternativ un caracter stinga, unul dreapta. Acest lucru necesita in final un test in plus pentru ultimul caracter.

In ambele cazuri se va transmite sub forma de sir de caractere informatia care trebuie scrisa.

Exemplu de apelare:

```
100 LET a$="Exemplu de scriere pe 64 coloane"
110 PRINT AT 10,20;:GOSUB 1000
```

Presupunind ca rutina de scriere se afla la linia 1000 (vezi programul 64col64000) pe ecran se va scrie incepind cu coloana 20 din linia 10.

Seturile de caractere inguste se pot realiza folosind unul din produsele specializate (ART STUDIO, ARTIST,etc.).

9.2.5. WINDOWS

In practica muncii de programare exista dese situatii in care in care ecranul devine insuficient pentru afisarea tuturor datelor.De exemplu la lucrul interactiv cu utilizatorul pentru afisarea unor indicatii suplimentare in cazul aparitiei unor erori sau pentru a isarea meniurilor.

Pentru a putea rezolva aceste situatii se recurge la suprapunerea peste ecranul curent a unor ferestre in care se vor afisa diverse informatii.Dupa utilizare portiunea de ecran se reface cu vechile date.

Aceasta metoda este cunoscuta sub denumirea de "WINDOW TEHNIC"si s-a extins odata cu aparitia calculatoarelor personal-profesionale,de expemplu pe IBM PC,AMIGA,APPLE,ATARI 1040ST. Firma APPLE si ATARI au implementat aceasta metoda in sistemul de operare al produselor lor.

Pentru utilizarea acestei metode si pe calculatoarele compatibile SPECTRUM am creat o rutina de salvare si restaurare a portiunilor de ecran.

Programul este relocabil (ruleaza la orice adresa).Pentru utilizarea lui trebuiesc definite doua functii :

```
etic. DEF FN W(A,B,C,D)=USR adr.:DEF FN R()=USR adr.+10
```

unde adr. reprezinta adresa de incarcare a programului.

Prima functie salveaza iar a doua restaureaza portiuni de ecran Parametrii A,B,C,D au urmatoarele semnificatii:

-A coordonata y a coltului de sus (in caractere)

-B coordonata x a coltului de sus

-C numarul de linii

-D numarul de coloane

Apelurile succesive ale functiei FN W are ca efect salvarea ferestelor intr-o stiva de tip LIFO si deci functia FN R restaureaza ultima fereasta.Pentru descarcarea stivei se foloseste functia FN R in mod repetat (programul gestioneaza memoria eliberind utilizatorul de aceasta sarcina).Implicit se pot salva 7000 de octeti.In caz de depasire se genereaza eroarea

```
G No room for line
```

Marirea dimensiunii stivei se face inainte de prima lansare cu

```
POKE adr.+381,dim-INT(dim/256)*256 si
POKE adr.+382,INT(dim/256)
```

```

9.2.6 64col-Z80

Pe calculatorul TIM-S si HC-85 caracterele se formeaza intr-o matrice de 8x8 puncte.Aceasta conduce la scrierea a 32 de caractere pe un rind.Marimea de 8x8 puncte a fost aleasa de catre firma datorita simplitatii algoritmului de afisare(se elimina multe calcule datorita conformatiei ecranului). Caracterele sint insa prea late si neestetice.Nu se respecta proportia standard de 6/10.

Unele programe folosesc rutine proprii de scriere de 5x8 puncte(microprint),deci 51 caractere pe rind.Algoritmul este mai lent dar caracterele sint mai estetice si lizibilitatea sporita.

Scrieare a 64 caractere pe un rind(un caracter pe 4x8 puncte) este un compromis intre viteza,lizibilitate si estetica. Acest mod de scriere este adecvat pentru cei care programeaza in Pascal sub compilatorul HP4TM,liniile sursa putinduse alinia mai spre interior existind posibilitatea evidentierii unor structuri imbricate.

Programul este scris in limbaj masina avind o lungime de 1100 octeti inclusiv setul de caractere.Se incarca implicit de la adresa 63760 si nu este relocabil.Nu distruge caracterele grafice definite de utilizator.Nu permite scrierea cu OVER,INK, INVERSE,PAPER,FLASH,BRIGHT deoarece toate verificarile facute cu prvire la instructiunile de mai sus duce la pierderea vitezei.

Mai jos se va prezenta modul de lansare sub HP4TM.

```
LOAD"HP4TM16"
-in HP4TM se raspunde la Top of RAM? cu 63760
-la aparitia cursorului ">" se tasteaza B (ENTER)
-din BASIC se,incarca rutina "64col-Z80"
    LOAD"64col-Z80"CODE  si
    RANDOMIZE USR 63770:RANDOMIZE USR 24603.
```

Programul poate fi folosit cu succes si in BASIC.La aparitia unei erori se reface canalul S si textul va aparea cu caracterele setului de 64(caracterele vor fi dublate).Pentru inlaturarea acestui neajuns se va inrtoduce POKE 23607,60 care comuta pe setul standard de caractere.Deci daca canalul K (canal de eroare si input in partea inferioara a ecranului) nu este

folosit se poate scrie pe 64 caractere si in BASIC dar numai in cadrul unui program nu si folosind comenzi directe. In continuare se prezinta secventa de utilizare a rutinei in BASIC:

```
etic. RANDOMIZE USR 63770:REM sciere pe 64 caractere
                .
                .
                .

9.2.7. COPY ROMOM/ROBOTRON

Una din cele mai importante probleme in interfatarea calculatorului personal cu imprimanta este aceea a realizarii unei copii grafice a imaginii de pe monitor.

Calculatoarele personale compatibile Spectrum Tim-S si HC-85 au implementata instructiunea COPY dar ea nu poate fi utilizata decit fie pe imprimanta SCAMP 9335 (Tim-S), fie pe ZX Printer (Spectrum si HC). In plus la ambele exista un singur tip de COPY fara a permite listarea in format variabil.

Aceste limitari ale instructiunii COPY precum si faptul ca in scoala dispunem si de alte tipuri de imprimante (ROMOM/ROBOTRON 6313) au impus realizarea unor rutine care sa permita copierea grafica si cu format variabil:

- marime 1 - un pixel pe monitor=un punct la imprimanta
- marime 2 - un pixel pe monitor=patru puncte la imprimanta
- TRUE VIDEO
- INVERS VIDEO

Dupa incarcarea programului (BASIC +rutine) apare un meniu care solicita alegerea unei optiuni:

- incarcare SCREEN$ cu HEAD
- incarcare SCREEN$ fara HEAD
- salvare SCREEN$ (salvarea se face fara HEAD)
- tiparire SCREEN$

La alegerea ultimei optiuni se trece la alegerea formatului de tiparire.

Rutina pentru imprimanta ROBOTRON nu are implementata optiunea pentru TRUE/INVERS VIDEO) dar acest lucru se poate realiza foarte usor prin complementarea intregului ecran.

9.2.8. COPY SCAMP

Pentru copierea imaginii de pe monitorul unui calculator SPECTRUM sau HC s-a realizat un program asemanator, ca mod de utilizare, cu programul COPY ROMOM (a se vedea 9.2.7.).

Deosebirile fata de celelalte rutine sint urmatoarele:

- permite si listarea la marime 3 - un pixel de pe monitor = 9 puncte la imprimanta
- optiunile sint altfel structurate
- iesirea spre imprimanta se face prin extensia cu care sint prevazute cele doua tipuri de calculatoare, printr-o interfata paralela

Rutina in cod masina a fost realizata de un colectiv de programatori din IASI, interfatarea rutina-utilizator fiind realizata de noi, in cadrul liceului.

9.2.9 LLIST ROM-ROB

In scopul pastrarii datelor si informatiilor pe un suport extern,cu posibilitatea de a fi citit de om,calculatorul TIM-S a fost prevazut cu o interfata seriala si una paralela.Datorita acestor interfete se pot conecta toate imprimantele care respecta standardele de transmisie seriala si paralela anume RS232 respectiv CENTRONICS.

Softul de comanda a acestor imprimante are insa unele neajunsuri.A fost proiectat sa pastreze formatul ecranului,adica 32 caractere pe un rind.Asta duce la o risipa imensa de hirtie, lungimeae unui rind imprimat la majoritatea imprimantelor depaseste 80 caractere.In plus se pierde din claritate si lizibilitate,un listing lung este mai greu de urmarit.

Pe linga setul standard de caractere ASCII unele imprimante accepta si o serie de caractere de control (ca de exempu schimbarea setului de caractere,schimbarea modului de tiparire, trecerea in mod grafic si multe altele).Aceste caractere de control nu se pot transmite direct la imprimanta,BASIC-ul filtreaza caracterele ce vor fi transmise(toate caracterele de control sint inlocuite cu semne de intrebare "?").

9.2.10. 11TIM-S

O alta rutina folosita pentru listarea la imprimanta ROMOM a rezultatelor rularii este 11TIM-S.

Rutina se incarca de la adresa 60000 cu instructiunea LOAD "11TIM-S" CODE 60000 si se activeaza cu urmatoarea secventa de comenzi:

```
POKE 23749,96: POKE 23750,234
```

In continuare toate instructiunile LLIST si LPRINT vor fi directionate catre imprimanta ROMOM conform standardului de transmisie paralela CENTRONICS.

```

9.2.11. LLIST SCAMP

Calculatoarele personale compatibile Spectrum (Tim-S si HC-85) permit listarea folosind instructiunile LLIST si LPRINT dar acest lucru provoaca doar scrierea la imprimanta doar pe 32 coloane (la Tim-S), lucru care bineinteles nu convine din mai multe puncte de vedere (listinguri lungi, risipa de hirtie).

In plus calculatoarele Spectrum dispun de o cupla de extensie care poate fi folosita daca se realizeaza interfata corespunzatoare. Acest lucru fiind realizat la noi in scoala ne-am propus si realizarea unei rutine care sa permita folosirea interfetei paralele a imprimantei SCAMP 9335.

Rutina nu este relocabila dar printr-o simpla reasamblare rutina poate fi incarcata la orice adresa. Pentru transmiterea unor caractere de control din BASIC rutina are prevazuta o parte care realizeaza acest lucru folosind locatia 23681.

Avind aceasta rutina precum si altele cu aceasi functie pentru imprimantele ROMOM si ROBOTRON, pot fi folosite si celelalte produse soft realizate de firma: HP4T, GENS, MONS, C, prin incarcarea rutinei la adresa dorita si transmiterea adresei unde a fost incarcata in locatiile 23749/50.
