STANDARD LIGHT EMITTING DIODES (∅ 5 ROUND TYPE)

GENERAL DESCRIPTION

The Standard Light Emitting Diodes are solid state lamps which include a light emitting diode (LED) mounted on a lead-frame and encapsulated in a ∅ 5 mm standard case of a standard epoxy composition. The short lead is the cathode. The shape and the composition of the case provide a wide viewing angle, uniform aesthetic appearance and an excellent off / on contrast. The MDE Standard Light Emitting Diodes have two red series. The difference between them consists in the semiconductor LED chip type.
The 1101...3 R series has a GaAsP / GaAs or GaAsP / GaP red LED and the 1111...3 R has a GaP / GaP red LED.
These lamps are intended for High Volume / Low cost application such as indicators for appliances, automobil instrument panels and many commercial uses.

FEATURES

* Low power consumption
* Long life
* Low cost
* Broad application
* Diffused lens

HIGH EFFICIENCY LIGHT EMITTING DIODES

GENERAL DESCRIPTION

These solid state lamps include a red (R), orange (P), yellow (G) or green (V) light emitting diode packed in a ∅ 5 mm epoxy case.
The luminous intensity of these lamps is high and the viewing angle narrow.
The coloured undiffused and the white lens high effiency light emitting diodes are designed for applications where a point source is desired. They are particullary useful where the light must be focused or diffused with external optics.
The white lens is useful in masking the colour of the lamp in the off condition.

FEATURES

* High intensity
* Narrow viewing angle
* Low power consumption
* Long life

MINIATURE LIGHT EMITTING DIODES

GENERAL DESCRIPTION

The Miniature Light Emitting Diodes are GaAsP or GaP LED chips mounted in a ∅ 3 mm, diffused coloured epoxy package. Their small size, wide viewing angle and good luminous intensity contribute to their versatility as all purpose indicators.

FEATURES

* Small size
* Bright
* Wide viewing angle
* Long life
* Low cost

RECTANGULAR LIGHT EMITTING DIODES

GENERAL DESCRIPTION

The MDE 1531...1536 series consists in a red (R) orange (P), yelow (G) or green (V) LED chip mounted on a lead-frame and encapsulated in a top tinted rectangular epoxy package.

FEATURES

* Rectangular Light Emitting Surface
* Low current requirements
* Long life

TRIANGULAR LIGHT EMITTING DIODES

GENERAL DESCRIPTION

The MDE 1541...3 series consists in red (R), orange (P), yellow (G) or green (V) LED chips mounted on a lead frame and encapsulated in a top tinted triangular epoxy case.

FEATURES

* High intensity
* Triangular Light Emiting Surface
* Long Life
* IC Compatible
* Low Current Requirements

FLAT TOP LEDs (∅2 mm)

GENERAL DESCRIPTION

The MDE Flat Top LED series has a ∅ 2 mm. red, yellow, orange or green bright surface. The convex shape of the case permits a good montage on front panels. The length of the pin allows a good penetration through the panel thickness.

FEATURES

* ∅ 2 mm uniform illuminated surface
* Mounts flush with panel
* Long Life
* IC Compatible

POLARYTY INDICATOR LED

GENERAL DESCRIPTION

The MDE Polarity Indicator contains two parallel mounted GaP LED chips: one red and the other green. The Polarity Indicator offers a changing colour dependent on the direction the lamp is biased. This MDE series is white diffused epoxy encapsulated in a standard ∅ 5 mm case.

FEATURES

* White epoxy case
* Wide Viewing Angle
* High intensity
* Long life
* 3 states: red, green, off.

RESISTOR LEDs

GENERAL DESCRIPTION

This solid state resistor lamp containts an integral current limiting resistor in series with the LED. This allows the lamp to be driven from a 5 volts source without the need for an external current limiter.

FEATURES

* Integral Current Limiting Resistor
* TTL Compatible
* Wide viewing angle

INFRARED LIGHT EMITTING DIODES

The MDE Infrared Light Emitting Diodes are made of efficient liquid epitaxial GaAs LED chips. The MDE 3323 series has a ⌀ 3 mm epoxy case (fig.1), the MDE 3123 has a ⌀ 5 mm epoxy case (fig. 2) and the MDE 3523 series has a rectangular epoxy case (fig. 3). The MDE 3683 series is mounted on a TO-18 header with epoxy clear lens (fig. 5). The MDE 3643 series with the GaAs infrared LED chip mounted on a TO-18 header had a flat epoxy window cap (fig. 4)

FEATURES

* Good spectral matching with silicon photodetectors
* High loading capability in pulse operation
* High radiant power
* Vibration resistant
* Long life

PHOTOTRANSISTOR

GENERAL DESCRIPTION

The MDR 4213 series are silicon npn phototransistors encapsulated in an epoxy case. The MDR 4213-11 has a standard ∅ 5 mm epoxy case (fig. 1), the MDR 4213-51 has a rectangular case (fig. 2) and the MDR 4213-31 a miniature (∅ 3 mm) case (fig. 3).

FEATURES

* White clear epoxy case
* Suitable for visible and near infrared radition
* High sensitivity
* Axial terminals

APLICATIONS

* Detector in electronic control and drive circuits
* Detector in optocouplers

OPTOCOUPLERS

REFLECTIVE OPTO-SWITCH

MDC 2211—01

GALVANIC ISOLATOR OPTO-COUPLER

MDC 1111—03
MDC 1111—05

REFLECTIVE OPTO-SWITCH

GENERAL DESCRIPTION

This MDC series is an optocoupler at which the optical coupling radiation is necessary to be reflected by an external reflective surface. The distance between the optocoupler and this surface has to be max. 5,6 mm. This MDC optocoupler has in its composition a rectangular MDE Infrared Light Emitting Diode and a rectangular MDR Phototransistor. These two compounds are mounted in an opaque ABS case so that their mechanical axes (which practically coincide with the optical axes) form a 34 degree angle.

FEATURES

* Plastic case
* Compact construction
* Low coupling capacity

APPLICATIONS

* Proximity photodetectors
* Mouvement detectors
* End of tape sensing

GALVANIC ISOLATOR OPTOCOUPLER

GENERAL DESCRIPTION

The MDE Galvanic Isolator Optocupler consists of a MDE ∅ 5 mm or ∅ 3 mm Infrared LED and a MDE ∅ 5 or ∅ 3 mm Phototransistor. These two compo-nents are sealed in a ∅ 5 or ∅ 3 mm opaque plas-tic tube.

FEATURES

* Hermetically plastic case
* Low coupling capacity
* DC isolation voltage
* Compact construction

APPLICATIONS

* Galvanically separated circuits

1 DIGIT DISPLAY

GENERAL DESCRIPTION

The 7,62 mm seven segment display with right hand, left hand or less decimal point and common anode or cathode are plastic encapsulated.
The emissive GaP chips (LED) are mounted on a dual-in-line pin PCB.

FEATURES

* High luminous intensity
* Low power requirements
* Wide viewing angle
* High reliability and long life
* Usable in vibrating environment

OVERFLOW DISPLAY

GENERAL DESCRIPTION

The MDE overflow display has four segments and a right decimal point. It consists of GaP red or green LEDs mounted on a dual-in-line 14 pin substrate. It provides polarity and overflow display capability. It is matched with the 7,62 mm 1 Digit MDE display.

FEATURES

* High luminous intensity
* Low power requirements
* Wide viewing angle
* High reliability and long life
* Usable in vibrating environment.

GENERAL DESCRIPTION

This MDE series consists of GaP red (R) or green (V) LED chips mounted on a dual-in-line pin implanted PCBs.
The height of the digits is 12,7 mm, so that this display is matched with the '2 Digits' MDE series.

FEATURES

* High luminous intensity
* Low power requirements
* Wide viewing angle
* High reliability and long life
* IC compatible
* Back sealed package for MDE 2541-03, 2541-04, 2551-13, 2551-14 or back unsealed package for MDE 2541-01, 2541-02, 2551-11, 2551-12.

5X7 DOT MATRIX DISPLAY

GENERAL DESCRIPTION

The MDE 2701, 2 R, V series consists in GaP red (R) or green (V) LED chips mounted on a dual-in-line pin PCB.

FEATURES

* 5x7 and decimal point dot matrix
* Ideal for graphics panels
* Excellent character appearance
* Mechanically rugged

APPLICATIONS

* Applications include electronic instrumentation, computer peripherals, point of sale terminals.

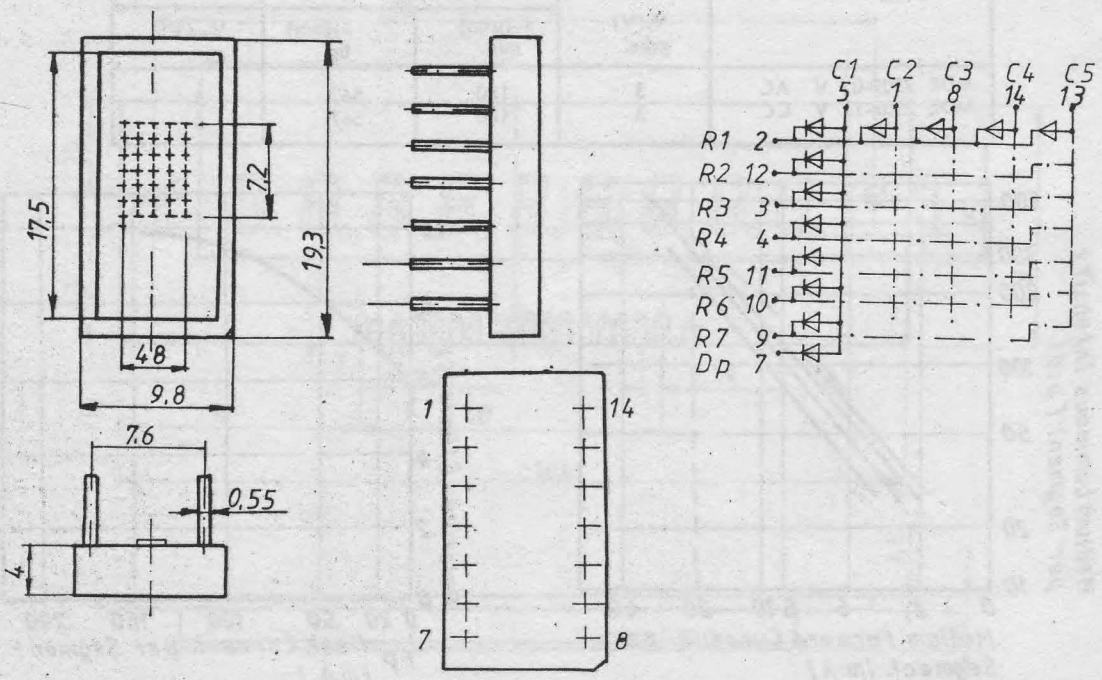
	Symbol	Unit.	Red	Green
Power Dissipation (for segment or d.p.)	$P_{tot.}$	mW	50	80
Forward Current (for segment or d.p.)	$I_{F.}$	mA	20	20
Peak Forard Current (for segment or d.p.) (1µs pulse width, 300pps)	$I_{FP.}$	mA	60	60
Operating Temperature	$T_{op.}$	°C	-25...+70	-25...+70
Storage Temperature	$T_{stg.}$	°C	-40...+70	-40...+70
Lead Soldering Temperature $T_{sld.} = 3s$)	$T_{sld.}$	°C	+260	+260

PACKAGE DIMENSIONS



OPTOELECTRIC CHARACTERISTICS AT $T_{amb} = 25°C$

TYPE	V_F(V) max.	$I_F = 10mA$		$I_R = 100\mu A$
		I_V(μcd) min.	λ_P(nm) tip.	V_{BR}(V) min.

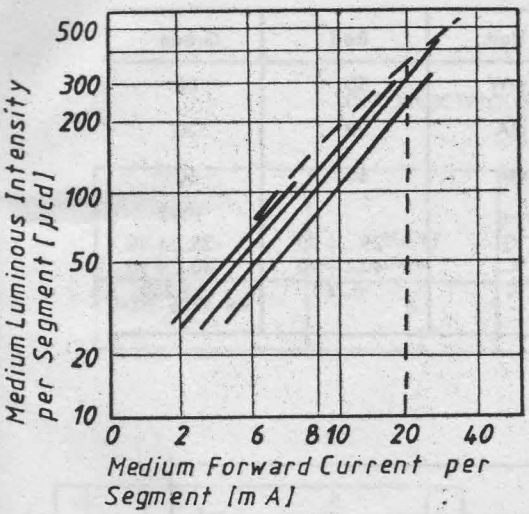
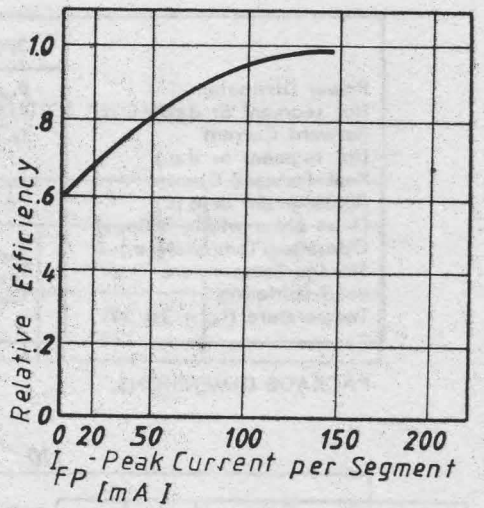
* Green	3	150 / 350	567	5

NOTES :
* Product in development





BARGRAPH

GENERAL DESCRIPTION

The MDE Bargraph has 2×11 segments: the first 2×7 segments are green and the rest are red.
The GaP red and green LED chips are mounted on a printed circuit board and plastic encapsulated.

FEATURES

* High luminous intensity
* Low power requirements
* High reliability and long life

APPLICATIONS

* Level meters
* Audio, video electronic equipments

ABSOLUTE MAXIMUM RATINGS

T_{amb} = 5°C

	Symbol	Unit.	Red	Green
